Attention: Mr Simon LEUNG

Dear Sirs

Agreement No. CE 45/2008 (CE)
Liantang/Heung Yuen Wai Boundary Control Point and Associated Works
Independent Environmental Checker – Investigation
Quarterly EM&A Summary Report (No. 10) – Nov 2015 to Jan 2016

With reference to the Quarterly EM&A Report No. 10 for Nov 2015 to Jan 2016 (Version 2) certified by the ET Leader and received by us on 27 April 2016, please be noted that we have no adverse comments on the captioned submission. We herewith verify the captioned submission in accordance with Section 13.4 of the EM&A Manual.

Thank you for your attention and please do not hesitate to contact the undersigned on tel. 3995-8120 or by email to antony.wong@smec.com; or our Mr Man Kit CHEUNG on tel. 3995 8132 or by email to man.cheung@smec.com.

Yours faithfully for and on behalf of SMEC Asia Limited

Antony WONG

EXECUTIVE SUMMARY

ES.01. This is the **10th** Quarterly EM&A Summary Report for the "*Liantang/Heung Yuen Wai Boundary Control Point and Associated Works*" under Environmental Permit No. EP-404/2011/C (hereinafter "the EP"), covering the period from **1 November 2015 to 31 January 2016** (hereinafter "Reporting Period").

ENVIRONMENTAL MONITORING AND AUDIT ACTIVITIES

ES.02. In the Reporting Period, the active contracts included Contract 2, Contract 3, Contract 5, Contract 6 and Contract SS C505. Environmental monitoring activities under the EM&A programme in the Reporting Period are summarized in the following table.

Environmental	Monitoring	Reporting Period	
Aspect	Parameters / Inspection	Monitoring Locations / Contracts	Total Occasions
Air Quality	1-hour TSP	9	417
All Quality	24-hour TSP	9	146
Construction Noise	L _{eq(30min)} Daytime	10	155
		WM1 & WM1-C,	38 (*)
	Water in-situ measurement and/or sampling	WM2A & WM2A-C	39 (*)
Water Quality		WM2B & WM2B-C	45 (*)
		WM3 &WM3-C	39 (*)
		WM4, WM4-CA &WM4-CB	38
	IEC, ET, the	Contract 2	13
	Contractor and RE	Contract 3	13
Joint Site Inspection	joint site	Contract 5	13
/ Audit	Environmental	Contract 6	13
	Inspection and	Contract 7	2
	Auditing	Contract SS C505	13

^(*) number of sampling day

BREACHES OF ACTION/LIMIT LEVELS

ES.03. In the Reporting Period, no air quality exceedances were registered but one (1) Limit Level exceedance of construction noise was recorded. For water quality monitoring, a total of seventy-nine (79) Action/ Limit Level exceedances were recorded including the parameters of turbidity and SS. The summary of breach of environmental performance is shown below.

Environmental	Manitanina	A a4: a	Limit	Event & Action		
Aspect	Monitoring Parameters	Action Level	Limit	NOE Issued	Investigation	Corrective Actions
A: O 114	1-hour TSP	0	0	0		
Air Quality	24-hour TSP	0	0	0		N/A
Construction Noise	L _{eq(30min)} Daytime	0	1	1	Not project related	N/A
	DO	0	0	0	The Contractor of C6 were advised to improve	Improvement works have
Water Quality	Turbidity	2	40	42	the water mitigation measure as per the ISEMM of the EM&A	been undertaken by the Contractor
	SS	2	35	37	Manual	C6

ENVIRONMENTAL COMPLAINT

ES.04. In this Reporting Period, one (1) verbal and five (5) documented environmental complaints were received and lodged for Contracts 6. Follow up actions have been undertaking by the Contractor

to resolve the deficiencies. The investigation reports conducted by the ET were submitted to relevant parties.

NOTIFICATION OF SUMMONS AND SUCCESSFUL PROSECUTIONS

ES.05. No environmental summons or successful prosecutions were recorded in the Reporting Period. However, a warning letter from EPD was issued to Contract 6 on 1 February 2016 regarding Non Compliance (NC) with APCO for the non-covered dump trucks travelling to Fill Bank at TM Area 38 on 14 and 18 January 2016 respectively. As advised by the Contractor, a briefing and warning letter has given to the relevant drivers to prevent reoccurrence of similar case.

REPORTING CHANGES

ES.06. No reporting changes were made in the Reporting Period.

FUTURE KEY ISSUES

- ES.07. During dry season, special attention should be paid on the potential construction dust impact since most of the construction sites are adjacent to villages. The Contractor should fully implement the construction dust mitigation measures properly.
- ES.08. The Contractor was also reminded to prevent muddy water or other water pollutants from site surface flow to local stream such as Kong Yiu Channel and Ma Wat Channel or public area. Water quality mitigation measures to prevent muddy runoff into nearby water bodies or public areas should paid attention and fully implemented.
- ES.09. Construction noise would be a key environmental issue during construction work of the Project. Noise mitigation measures such as using quiet plants should be implemented in accordance with the EM&A requirement.

1 INTRODUCTION

(November 2015 to January 2016)

1.1 PROJECT BACKGROUND

- 1.1.1. Civil Engineering and Development Department is the Project Proponent and the Permit Holder of Agreement No. CE 45/2008 (CE) Liantang / Heung Yuen Wai Boundary Control Point and Associated Works, which is a Designated Project to be implemented under Environmental Permit number EP-404/2011/C granted on 12 March 2015.
- 1.1.2. The Project consists of two main components: Construction of a Boundary Control Point (hereinafter referred as "BCP"); and Construction of a connecting road alignment. Layout plan of the Project is shown in *Appendix A*.
- 1.1.3. The proposed BCP is located at the boundary with Shenzhen near the existing Chuk Yuen Village, comprising a main passenger building with passenger and cargo processing facilities and the associated customs, transport and ancillary facilities. The connecting road alignment consists of six main sections:
 - 1) Lin Ma Hang to Frontier Closed Area (FCA) Boundary this section comprises at-grade and viaducts and includes the improvement works at Lin Ma Hang Road;
 - 2) Ping Yeung to Wo Keng Shan this section stretches from the Frontier Closed Area Boundary to the tunnel portal at Cheung Shan and comprises at-grade and viaducts including an interchange at Ping Yeung;
 - 3) North Tunnel this section comprises the tunnel segment at Cheung Shan and includes a ventilation building at the portals on either end of the tunnel;
 - 4) Sha Tau Kok Road this section stretches from the tunnel portal at Wo Keng Shan to the tunnel portal south of Loi Tung and comprises at-grade and viaducts including an interchange at Sha Tau Kok and an administration building;
 - 5) South Tunnel this section comprises a tunnel segment that stretches from Loi Tung to Fanling and includes a ventilation building at the portals on either end of the tunnel as well as a ventilation building in the middle of the tunnel near Lau Shui Heung;
 - 6) Fanling this section comprises the at-grade, viaducts and interchange connection to the existing Fanling Highway.
- 1.1.4. Action-United Environmental Services & Consulting has been commissioned as an Independent ET to implement the relevant EM&A program in accordance with the approved EM&A Manual, as well as the associated duties.
- 1.1.5. This is the 10th Quarterly EM&A Summary Report for the "*Liantang/Heung Yuen Wai Boundary Control Point and Associated Works*" under Environmental Permit No. EP-404/2011/C, covering the period from 1 November 2015 to 31 January 2016.

1.2 REPORT STRUCTURE

- 1.2.1 The Monthly Environmental Monitoring and Audit (EM&A) Report is structured into the following sections:-
 - **Section 1** Introduction
 - **Section 2** Project Organization and Construction progress
 - **Section 3** Summary of Impact monitoring Requirements
 - **Section 4** Air Quality Monitoring
 - **Section 5** Construction Noise Monitoring
 - **Section 6** Water Quality Monitoring
 - Section 7 Waste Management
 - Section 8 Non-compliance, Complaints, Notifications of Summons and Successful Prosecutions
 - **Section 9** Implementation Status of Mitigation Measures
 - **Section 10** Conclusions and Recommendations

2 PROJECT ORGANIZATION AND CONSTRUCTION PROGRESS

2.1 CONSTRUCTION CONTRACT PACKAGING

- 2.1.1 To facilitate the project management and implementation, the Project would be divided by the following contracts:
 - Contract 2 (CV/2012/08)
 - Contract 3 (CV/2012/09)
 - Contract 4 (TCSS)
 - Contract 5 (CV/2013/03)
 - Contract 6 (CV/2013/08)
 - Contract 7 (NE/2014/03)
 - ArchSD Contract No. SS C505
- 2.1.2 The details of each contracts is summarized below and the delineation of each contracts is shown in *Appendix A*.

Contract 2 (CV/2012/08)

- 2.1.3 Contract 2 has awarded in December 2013 and construction work was commenced on 19 May 2014. Major Scope of Work of the Contract 2 is listed below:
 - construction of an approximately 5.2km long dual two-lane connecting road (with about 0.4km of at-grade road and 4.8km of tunnel) connecting the Fanling Interchange with the proposed Sha Tau Kok Interchange;
 - construction of a ventilation adit tunnel and the mid-ventilation building;
 - construction of the north and south portal buildings of the Lung Shan Tunnel and their associated slope works;
 - provision and installation of ventilation system, E&M works and building services works for Lung Shan tunnel and Cheung Shan tunnel and their portal buildings;
 - construction of Tunnel Administration Building adjacent to Wo Keng Shan Road and the associated E&M and building services works; and
 - construction of associated footpath, slopes, retaining structures, drainage, sewerage, waterworks, landscaping works and other ancillary works.

Contract 3 (CV/2012/09)

- 2.1.4 Contract 3 was awarded in July 2013 and construction work was commenced on 5 November 2013. Major Scope of Work of the Contract 3 is listed below:
 - construction of four link roads connecting the existing Fanling Highway and the south portal of the Lung Shan Tunnel;
 - realignment of the existing Tai Wo Service Road West and Tai Wo Service Road East;
 - widening of the existing Fanling Highway (HyD's entrustment works);
 - demolishing existing Kiu Tau vehicular bridge and Kiu Tau footbridge and reconstruction of the existing Kiu Tau Footbridge (HyD's entrustment works); and
 - construction of associated footpath, slopes, retaining structures, drainage, sewerage, waterworks, landscaping works and other ancillary works.

Contract 4 (NE/2014/02)

2.1.5 The works of Contract 4 are scheduled to commence in the 3rd quarter of 2015. The work of this Contract includes provision and installation of Traffic Control and Surveillance System and the associated electrical and mechanical works for the Project.

Contract 5 (CV/2013/03)

2.1.6 Contract 5 has awarded in April 2013 and construction work was commenced in August 2013. Major Scope of Work of the Contract 5 is listed below:

- site formation of about 23 hectares of land for the development of the BCP;
- construction of an approximately 1.6 km long perimeter road at the BCP including a 175m long depressed road;
- associated diversion/modification works at existing local roads and junctions including Lin Ma Hang Road;
- construction of pedestrian subway linking the BCP to Lin Ma Hang Road;
- provision of resite area with supporting infrastructure for reprovisioning of the affected village houses; and
- construction of associated footpath, slopes, retaining structures, drainage, sewerage, waterworks, landscaping works and other ancillary works.

Contract 6 (CV/2013/08)

- 2.1.7 Contract 6 was awarded in June 2015 and construction work was expected to be commenced on 23 October 2015. Major Scope of Work of the Contract 6 will be included below:
 - construction of an approximately 4.6km long dual two-lane connecting road (with about 0.6km of at-grade road, 3.3km of viaduct and 0.7km of tunnel) connecting the BCP with the proposed Sha Tau Kok Road Interchange and the associated ventilation buildings;
 - associated diversion/modification works at access roads to the resite of Chuk Yuen Village;
 - provision of sewage collection, treatment and disposal facilities for the BCP and the resite of Chuk Yuen Village;
 - construction of a pedestrian subway linking the BCP to Lin Ma Hang Road;
 - provisioning of the affected facilities including Wo Keng Shan Road garden; and
 - construction of associated footpath, slopes, retaining structures, drainage, sewerage, waterworks, landscaping works and other ancillary works.

Contract 7 (NE/2014/03)

- 2.1.8 Contract 7 has awarded in December 2015 and the construction works of Contract 7 will tentatively commence in February 2016. Major Scope of Work of the Contract 7 would be included below:
 - construction of the Hong Kong Special Administrative Region (HKSAR) portion of four vehicular bridge
 - construction of one pedestrian bridge crossing Shenzhen (SZ) River (cross boundary bridges)

ArchSD Contract No. SS C505

- 2.1.9 SS C505 has been awarded in July 2015 and construction work was commenced on 1 September 2015. Major Scope of Work of the SS C505 would be included below:
 - passenger-related facilities including processing kiosks and examination facilities for private cars and coaches, passenger clearance building and halls, the interior fitting works for the pedestrian bridge crossing Shenzhen River, etc.;
 - cargo processing facilities including kiosks for clearance of goods vehicles, customs inspection platforms, X-ray building, etc.;
 - accommodation for the facilities inside of the Government departments providing services in connection with the BCP;
 - transport-related facilities inside the BCP including road networks, public transport interchange, transport drop-off and pick-up areas, vehicle holding areas and associated road furniture etc:
 - a public carpark; and
 - other ancillary facilities such as sewerage and drainage, building services provisions and electronic systems, associated environmental mitigation measure and landscape works.

2.2 PROJECT ORGANIZATION

2.2.1 The project organization is shown in *Appendix B*. The responsibilities of respective parties are:

Civil Engineering and Development Department (CEDD)

2.2.2 CEDD is the Project Proponent and the Permit Holder of the EP of the development of the Project and will assume overall responsibility for the project. An Independent Environmental Checker (IEC) shall be employed by CEDD to audit the results of the EM&A works carried out by the ET.

<u>Architectural Services Department (ArchSD)</u>

2.2.3 ArchSD acts as the works agent for Development Bureau (DEVB), for Contract SS C505 Liantang/Heung Yuen Wai Boundary Control Point (BCP) – BCP Buildings and Associated Facilities.

Environmental Protection Department (EPD)

2.2.4 EPD is the statutory enforcement body for environmental protection matters in Hong Kong.

Ronald Lu & Partners (Hong Kong) Ltd (The Architect)

- 2.2.5 Ronald Lu & Partners (Hong Kong) Ltd is appointed by ArchSD as an Architect for Contract SS C505 Liantang/ Heung Yuen Wai Boundary Control Point (BCP) BCP Buildings and Associated Facilities. It responsible for overseeing the construction works of Contract SS C505 and for ensuring that the works are undertaken by the Contractor in accordance with the specification and contract requirements. The duties and responsibilities of the Architect with respect to EM&A are:
 - Monitor the Contractors' compliance with contract specifications, including the implementation and operation of the environmental mitigation measures and their effectiveness
 - Monitor Contractors' and ET's compliance with the requirements in the Environmental Permit (EP) and EM&A Manual
 - Facilitate ET's implementation of the EM&A programme
 - Participate in joint site inspection by the ET and IEC
 - Oversee the implementation of the agreed Event / Action Plan in the event of any exceedance
 - Adhere to the procedures for carrying out complaint investigation
 - Liaison with DSD, Engineer/Engineer's Representative, ET, IEC and the Contractor of the "Construction of the DSD's Regulation of Shenzhen River Stage 4 (RSR 4)" Project discussing regarding the cumulative impact issues.

Engineer or Engineers Representative (ER)

- 2.2.6 The ER is responsible for overseeing the construction works and for ensuring that the works are undertaken by the Contractor in accordance with the specification and contract requirements. The duties and responsibilities of the ER with respect to EM&A are:
 - Monitor the Contractors' compliance with contract specifications, including the implementation and operation of the environmental mitigation measures and their effectiveness
 - Monitor Contractors's, ET's and IEC's compliance with the requirements in the Environmental Permit (EP) and EM&A Manual
 - Facilitate ET's implementation of the EM&A programme
 - Participate in joint site inspection by the ET and IEC
 - Oversee the implementation of the agreed Event / Action Plan in the event of any exceedance
 - Adhere to the procedures for carrying out complaint investigation
 - Liaison with DSD, Engineer/Engineer's Representative, ET, IEC and the Contractor of the "Construction of the DSD's Regulaiton of Shenzhen River Stage 4 (RSR 4)" Project discussing regarding the cumulative impact issues.

The Contractor(s)

2.2.7 There will be one contractor for each individual works contract. The Contractor(s) should report

to the ER. The duties and responsibilities of the Contractor are:

- Comply with the relevant contract conditions and specifications on environmental protection
- Employ an Environmental Team (ET) to undertake monitoring, laboratory analysis and reporting of EM &A Facilitate ET's monitoring and site inspection activities
- Participate in the site inspections by the ET and IEC, and undertake any corrective actions
- Provide information / advice to the ET regarding works programme and activities which may contribute to the generation of adverse environmental impacts
- Submit proposals on mitigation measures in case of exceedances of Action and Limit levels in accordance with the Event / Action Plans
- Implement measures to reduce impact where Action and Limit levels are exceeded
- Adhere to the procedures for carrying out complaint investigation

Environmental Team (ET)

(November 2015 to January 2016)

- 2.2.8 One ET will be employed for this Project. The ET shall not be in any way an associated body of the Contractor(s), and shall be employed by the Project Proponent/Contractor to conduct the EM&A programme. The ET should be managed by the ET Leader. The ET Leader shall be a person who has at least 7 years' experience in EM&A and has relevant professional qualifications. Suitably qualified staff should be included in the ET, and resources for the implementation of the EM&A programme should be allocated in time under the Contract(s), to enable fulfillment of the Project's EM&A requirements as specified in the EM&A Manual during construction of the Project. The ET shall report to the Project Proponent and the duties shall include:
 - Monitor and audit various environmental parameters as required in this EM&A Manual
 - Analyse the environmental monitoring and audit data, review the success of EM&A
 programme and the adequacy of mitigation measures implemented, confirm the validity of
 the EIA predictions and identify any adverse environmental impacts arising
 - Carry out regular site inspection to investigate and audit the Contractors' site practice, equipment/plant and work methodologies with respect to pollution control and environmental mitigation, and effect proactive action to pre-empt problems
 - Monitor compliance with conditions in the EP, environmental protection, pollution prevention and control regulations and contract specifications
 - Audit environmental conditions on site
 - Report on the environmental monitoring and audit results to EPD, the ER, the lEC and Contractor(s) or their delegated representatives
 - Recommend suitable mitigation measures to the Contractor in the case of exceedance of Action and Limit levels in accordance with the Event and Action Plans
 - Liaise with the IEC on all environmental performance matters and timely submit all relevant EM&A proforma for approval by IEC
 - Advise the Contractor(s) on environmental improvement, awareness, enhancement measures etc., on site
 - Adhere to the procedures for carrying out complaint investigation
 - Liaison with the client departments, Engineer/Engineer's Representative, ET, IEC and the Contractor(s) of the concurrent projects as listed under Section 2.3 below regarding the cumulative impact issues.

Independent Environmental Checker (IEC)

- 2.2.9 One IEC will be employed for this Project. The Independent Environmental Checker (IEC) should not be in any way an associated body of the Contractor(s) or the ET for the Project. The IEC should be employed by the Permit Holder (i.e., CEDD) prior to the commencement of the construction of the Project. The IEC should have at least 10 years' experience in EM&A and have relevant professional qualifications. The duty of IEC should be:
 - Provide proactive advice to the ER and the Project Proponent on EM&A matters related to the project, independent from the management of construction works, but empowered to audit the environmental performance of construction

- Review and audit all aspects of the EM&A programme implemented by the ET
- Review and verify the monitoring data and all submissions in connection with the EP and EM&A Manual submitted by the ET
- Arrange and conduct regular, at least monthly site inspections of the works during construction phase, and ad hoc inspections if significant environmental problems are identified
- Check compliance with the agreed Event / Action Plan in the event of any exceedance
- Check compliance with the procedures for carrying out complaint investigation
- Check the effectiveness of corrective measures
- Feedback audit results to ET by signing off relevant EM&A proforma
- Check that the mitigation measures are effectively implemented
- Report the works conducted, the findings, recommendation and improvement of the site inspections, after reviewing ET's and Contractor's works, and advices to the ER and Project Proponent on a monthly basis
- Liaison with the client departments, Engineer/Engineer's Representative, ET, IEC and the Contractor(s) of the concurrent projects as listed under Section 2.3 below regarding the cumulative impact issues.

2.3 CONCURRENT PROJECTS

- 2.3.1 The concurrent construction works that may be carried out include, but not limited to, the following:
 - (a) Regulation of Shenzhen River Stage IV;
 - (b) Widening of Fanling Highway Tai Hang to Wo Hop Shek Interchange Contract No. HY/2012/06;
 - (c) Construction of BCP facilities in Shenzhen.

2.4 CONSTRUCTION PROGRESS

2.4.1 In the Reporting Period, the major construction activity conducted under the Project is located in Contracts 2, 3, 5, 6 and SS C505 and they are summarized in below. Moreover, the master construction program of the Contract 2, Contract 3, Contract 5, Contract 6 and SS C505 are enclosed in *Appendix C*. For Contract 7, construction activities were scheduled to commence in February 2016 and therefore no construction activities was undertaken in the Reporting Period.

Contract 2 (CV/2012/08)

2.4.2 Construction work of Contract 2 was commenced on 19 May 2014, the following activities were conducted in the Reporting Period.

Mid-Vent Portal • Cavern excavation

• Tube excavation (NB + SB) towards North Portal

• Adit invert slab

• Building works foundation

Installation of blast curtain

North Portal • Slope stabilization and retaining wall

• Southbound tunnel door erection

Northbound top heading canopies

• Northbound top heading excavation and tunnel enlargement

Tunnel Boring Machine excavation and initial drive

Southbound and Northbound Drill and Blast excavation

• Building works foundation and substructure

Admin Building • Building works foundation

Contract 3 (CV/2012/09)

South Portal

2.4.3 Contract commenced in November 2013, the following activities were conducted in the Reporting

Period.

- Cable detection and trial trenches
- Decking construction for Bridge E
- E&M work for new valve control & Telemetry House
- Filling works at Tong Hang East
- Storm drain laying
- Noise barrier construction
- Pier / pier table construction
- Pile cap works
- Piling works
- Portal beam construction
- Pre-drilling
- Road works at Fanling Highway
- Retaining Wall construction
- Socket H-pile installation
- Tree felling works
- Utilities duct laying
- Viaduct segment erection
- Portal beam construction
- Slope works
- Water works
- Sewer works
- FRP Lining on existing water main

Contract 4 (NE/2014/02)

2.4.4 The contract has not yet awarded.

Contract 5 (CV/2013/03)

- 2.4.5 Contract commenced in August 2013, the following activities were conducted in the Reporting Period.
 - Construction of rising main at existing Lin Ma Hang (LMH) Road
 - Drainage works at Road L15
 - Diversion of Underground Utility (UU) at existing LMH Road
 - Construction of secondary boundary fencing
 - Filling and drainage works for ArchSD permanent office
 - Construction of Depressed Road at BCP3
 - Additional works (Access Works) for Village House at RS4
 - Drainage works at existing/proposed LMH Road
 - Brick laying at footpath of proposed LMH road
 - Irrigation at proposed LMH Road
 - Formation works at BCPB Area
 - Installation of UU at proposed and existing LMH road
 - Road works (kerb laying) for proposed and existing LMH road and L15 Road
 - Irrigation system at proposed and existing LMH Road
 - Water works at existing LMH Road
 - Bituminous laying at existing & proposed LMH road and L15 Road
 - Construction of Pavilion at Chung Yuen Ha Village
 - Preparation works for planting at proposed LMH road
 - Remaining formation works at BCPB Area

Contract 6 (CV/2013/08)

- 2.4.6 Contract 6 has awarded in June 2015 and construction work was commenced on 23 October 2015. In this Reporting Period, construction activities conducted are listed below:
 - Site Clearance
 - Slope Works
 - Site Accesses Construction

(November 2015 to January 2016)

- Ground Investigation (GI) Works
- Soil nail
- · Bored piling

Contract 7 (NE/2014/03)

2.4.7 Construction works of Contract 7 did not commence in the reporting period

Contract SS C505

- 2.4.8 Contract SS C505 has awarded in July 2015 and construction work was commenced on 1 September 2015. In this Reporting Period, construction activities conducted are listed below:
 - Excavation & fill works
 - Predrilling
 - Pre-boring
 - · Percussive piling
 - Pile caps
 - Site office set-up
 - Structural works
 - Bored piling
 - Assembly of crawler crane
 - Site office / training centre set-up
 - Mock up for curtain wall
 - Weighbridge works
 - Construction of Prototype A

2.5 SUMMARY OF ENVIRONMENTAL SUBMISSIONS

- 2.5.1 In according to the EP, the required documents have submitted to EPD for retention which listed in below:
 - Project Layout Plans of Contracts 2, 3, 5, 6, 7 and SS C505
 - Landscape Plan
 - Topsoil Management Plan
 - Environmental Monitoring and Audit Programme
 - Baseline Monitoring Report (TCS00690/13/600/R0030v3) for the Project
 - Waste Management Plan of the Contracts 2, 3, 5, 6 and SS C505
 - Contamination Assessment Plan (CAP) for Po Kat Tsai, Loi Tung and the workshops in Fanling
 - Contamination Assessment Report (CAR) for Po Kat Tsai, Loi Tung and the workshops in Fanling
 - Vegetation Survey Report
 - Woodland Compensation Plan
 - Habitat Creation Management Plan
 - Wetland Compensation Plan
- 2.5.2 Summary of the relevant permits, licenses, and/or notifications on environmental protection for the Project of each contracts are presented in *Table 2-1*.

3 PROJECT ORGANIZATION AND CONSTRUCTION PROGRESS

3.1 GENERAL

- 3.1.1 The Environmental Monitoring and Audit requirements are set out in the Approved EM&A manual. Environmental issues such as air quality, construction noise and water quality were identified as the key issues during the construction phase of the Project.
- 3.1.2 A summary of construction phase EM&A requirements are presented in the sub-sections below.

3.2 MONITORING PARAMETERS

- 3.2.1 The EM&A program of construction phase monitoring shall cover the following environmental issues:
 - Air quality;
 - Construction noise; and
 - Water quality
- 3.2.2 A summary of the monitoring parameters is presented in *Table 3-1*.

Table 3-1 Summary of EM&A Requirements

Environmental Issue	Parameters		
Aim Ovolity	1-hour TSP by Real-Time Portable Dust Meter; and		
Air Quality	• 24-hour TSP by High Volume Air Sampler.		
	 L_{eq(30min)} in normal working days (Monday to Saturday) 		
	07:00-19:00 except public holiday; and		
Noise	• 3 sets of consecutive $L_{eq(5min)}$ on restricted hours i.e. 19:00 to 07:00		
110130	next day, and whole day of public holiday or Sunday		
	Supplementary information for data auditing, statistical results such		
	as L_{10} and L_{90} shall also be obtained for reference.		
	In-situ Measurements		
	 Dissolved Oxygen Concentration (mg/L); 		
	• Dissolved Oxygen Saturation (%);		
	Turbidity (NTU);		
Water Quality	pH unit;		
	Water depth (m); and		
	• Temperature (°C).		
	Laboratory Analysis		
	Suspended Solids (mg/L)		

3.3 MONITORING LOCATIONS

3.3.1 The designated monitoring locations as recommended in the *EM&A Manual* are shown in *Appendix D*. As the access to some of the designated monitoring locations was questionable due to safety reason or denied by the landlords, alternative locations therefore have had proposed. The proposed alternative monitoring locations has updated in the revised EM&A Programme which verified by IEC and certified by ET Leader prior submitted to EPD on 10 July 2013. *Table 3-2*, *Table 3-3* and *Table 3-4* are respectively listed the air quality, construction noise and water quality monitoring locations for the Project and a map showing these monitoring stations is presented in *Appendix E*.

Table 3-2 Impact Monitoring Stations - Air Quality

Station ID	Description	Works Area	Related to the Work Contract
AM1a*	Garden Farm, Tsung Yuen Ha Village	BCP	ArchSD SS C505
			Contract 5
AM2	Village House near Lin Ma Hang Road	LMH to Frontier	Contract 5,
		Closed Area	Contract 6

Station ID	Description	Works Area	Related to the Work Contract

AM8	Po Kat Tsai Village No. 4	Po Kat Tsai	Contract 2
AM9b#	Nam Wa Po Village House No. 80	Fanling	Contract 3

[#] Proposal for the change of air quality monitoring location from AM9a to AM9b was submitted to EPD on 4 Nov 2013 after verified by the IEC and it was approved by EPD (EPD's ref.: (15) in EP 2/N7/A/52 Pt.10 dated 8 Nov 2013).

Table 3-3 Impact Monitoring Stations - Construction Noise

Station ID	Description	Works Area	Related to the Work Contract
NM1	Tsung Yuen Ha Village House No. 63	ВСР	ArchSD SS C505
NM2	Village House near Lin Ma Hang Road	Lin Ma Hang to Frontier Closed Area	Contract 5 Contract 5, Contract 6
NM3	Ping Yeung Village House (facade facing northeast)	Ping Yeung to Wo Keng Shan	Contract 6
NM4	Wo Keng Shan Village House	Ping Yeung to Wo Keng Shan	Contract 6
NM5	Village House, Loi Tung	Sha Tau Kok Road	Contract 2, Contract 6
NM6	Tai Tong Wu Village House 2	Sha Tau Kok Road	Contract 2, Contract 6
NM7	Po Kat Tsai Village	Po Kat Tsai	Contract 2
NM8	Village House, Tong Hang	Fanling	Contract 2 Contract 3
NM9	Village House, Kiu Tau Village	Fanling	Contract 3
NM10	Nam Wa Po Village House No. 80	Fanling	Contract 3

Table 3-4 Impact Monitoring Stations - Water Quality

Station ID	Description	Coordinates of Designated / Alternative Location		Nature of the location	Related to the Work Contract
WM1	Downstream of Kong Yiu	833 679	845 421	Alternative location located at upstream 51m of the	C505
WM1- Control	Channel Upstream of Kong Yiu	834 185	845 917	designated location NA	Contract 5 ArchSD SS C505

^{*} Proposal for the change of air quality monitoring location from AM1to AM1a was submitted to EPD on 24 March 2014 after verified by the IEC. It was approved by EPD (EPD's ref.: (6) in EP 2/N7/A/52 Pt.12 dated 9 Jun 2014).

[@] Proposal for the change of air quality monitoring location from AM7a to AM7b was submitted to EPD on 4 June 2014 after verified by the IEC. It was approved by EPD (EPD's ref.: (7) in EP 2/N7/A/52 Pt.12 dated 9 Jun 2014).

Station ID	Description	Coordinates of Designated / Alternative Location		Designated / Alternative		Nature of the location	Related to the Work Contract
	Channel				Contract 5		
WM2A	Downstream of River Ganges	834 204	844 471	Alternative location located at downstream 81m of the designated location	Contract 6		
WM2A- Control	Upstream of River Ganges	835 270	844 243	Alternative location located at upstream 78m of the designated location	Contract 6		
WM2B	Downstream of River Ganges	835 433	843 397	NA	Contract 6		
WM2B- Control	Upstream of River Ganges	835 835	843 351	Alternative location located at downstream 31m of the designated location	Contract 6		
WM3	Downstream of River Indus	836 324	842 407	NA	Contract 2# Contract 6		
WM3- Control	Upstream of River Indus	836 763	842 400	Alternative location located at downstream 26m of the designated location	Contract 2# Contract 6		
WM4	Downstream of Ma Wat Channel	833 850	838 338	Alternative location located at upstream 11m of the designated location	Contract 2 Contract 3		
WM4– Control A	Kau Lung Hang Stream	834 028	837 695	Alternative location located at downstream 28m of the designated location	Contract 2 Contract 3		
WM4– Control B	Upstream of Ma Wat Channel	833760	837395	Alternative location located at upstream 15m of the designated location	Contract 2 Contract 3		

Remark: # updated since Contract 6 commenced on 23 October 2016.

3.4 MONITORING FREQUENCY AND PERIOD

3.4.1 The requirements of impact monitoring are stipulated in *Sections 2.1.6*, *3.1.5* and *4.1.6* of the approved *EM&A Manual* and presented as follows.

Air Quality Monitoring

- 3.4.2 Frequency of impact air quality monitoring is as follows:
 - 1-hour TSP 3 times every six days during course of works
 - 24-hour TSP Once every 6 days during course of works.

Noise Monitoring

3.4.3 One set of $L_{eq(30min)}$ as 6 consecutive $L_{eq(5min)}$ between 0700-1900 hours on normal weekdays and once every week during course of works. If construction work necessary to carry out at other time periods, i.e. restricted time period (19:00 to 07:00 the next morning and whole day on public holidays) (hereinafter referred as "the restricted hours"), 3 consecutive $L_{eq(5min)}$ measurement will depended CNP requirements to undertake. Supplementary information for data auditing, statistical results such as L_{10} and L_{90} shall also be obtained for reference.

Water Quality Monitoring

3.4.4 The water quality monitoring frequency shall be 3 days per week during course of works. The interval between two sets of monitoring shall not be less than 36 hours.

3.5 MONITORING EQUIPMENT

Air Quality Monitoring

- 3.5.1 The 24-hour and 1-hour TSP levels shall be measured by following the standard high volume sampling method as set out in the Title 40 of the Code of Federal Regulations, Chapter 1 (*Part 50*), *Appendix B*. If the ET proposes to use a direct reading dust meter to measure 1-hour TSP levels, it shall submit sufficient information to the IEC to approve.
- 3.5.2 The filter paper of 24-hour TSP measurement shall be determined by HOKLAS accredited laboratory.
- 3.5.3 All equipment to be used for air quality monitoring is listed in *Table 3-5*.

Table 3-5 Air Quality Monitoring Equipment

Equipment	Model	
24-Hour TSP		
High Volume Air Sampler	TISCH High Volume Air Sampler, HVS Model TE-5170	
Calibration Kit	TISCH Model TE-5025A	
	1-Hour TSP	
Portable Dust Meter	Sibata LD-3B Laser Dust monitor Particle Mass Profiler & Counter	

Wind Data Monitoring Equipment

- 3.5.4 According to the approved EM&A Manual, wind data monitoring equipment shall also be provided and set up for logging wind speed and wind direction near the dust monitoring locations. The equipment installation location shall be proposed by the ET and agreed with the IEC. For installation and operation of wind data monitoring equipment, the following points shall be observed:
 - 1) The wind sensors should be installed 10 m above ground so that they are clear of obstructions or turbulence caused by buildings.
 - 2) The wind data should be captured by a data logger. The data shall be downloaded for analysis at least once a month.
 - 3) The wind data monitoring equipment should be re-calibrated at least once every six months.
 - 4) Wind direction should be divided into 16 sectors of 22.5 degrees each.
- 3.5.5 ET has liaised with the landlords of the successful granted HVS installation premises. However, the owners rejected to provide premises for wind data monitoring equipment installation.
- 3.5.6 Under this situation, the ET proposed alternative methods to obtain representative wind data. Meteorological information as extracted from "the Hong Kong Observatory Ta Kwu Ling Station" is alternative method to obtain representative wind data. For Ta Kwu Ling Station, it is located nearby the Project site. Moreover, this station is located at 15m above mean sea level while its anemometer is located at 13m above the existing ground which in compliance with the general setting up requirement. Furthermore, this station also can be to provide the humidity, rainfall, and air pressure and temperature etc. meteorological information. In Hong Kong of a lot development projects, weather information extracted from Hong Kong Observatory is common alternative method if weather station installation not allowed.

Noise Monitoring

3.5.7 Sound level meter in compliance with the International Electrotechnical Commission Publications 651: 1979 (Type 1) and 804: 1985 (Type 1) specifications shall be used for carrying out the noise monitoring. The sound level meter shall be checked using an acoustic calibrator. The wind speed shall be checked with a portable wind speed meter capable of measuring the wind speed in m s-1.

3.5.8 Noise monitoring equipment to be used for monitoring is listed in *Table 3-6*.

Table 3-6 Construction Noise Monitoring Equipment

Equipment	Model	
Integrating Sound Level Meter	B&K Type 2238 or Rion NL-14 or Rion NL-31or Rion NL-52	
Calibrator	B&K Type 4231	
Portable Wind Speed Indicator	Testo Anemometer	

3.5.9 Sound level meters listed above comply with the International Electrotechnical Commission Publications 651: 1979 (Type 1) and 804: 1985 (Type 1) specifications, as recommended in TM issued under the NCO. The acoustic calibrator and sound level meter to be used in the impact monitoring will be calibrated yearly.

Water Quality Monitoring

- 3.5.10 DO and water temperature should be measured in-situ by a DO/temperature meter. The instrument should be portable and weatherproof using a DC power source. It should have a membrane electrode with automatic temperature compensation complete with a cable. The equipment should be capable of measuring:
 - DO level in the range of 0-20 mg/l and 0-200% saturation; and
 - temperature of between 0 and 45 degree Celsius.
- 3.5.11 A portable pH meter capable of measuring a range between 0.0 and 14.0 should be provided to measure pH under the specified conditions accordingly to the APHA Standard Methods.
- 3.5.12 The instrument should be portable and weatherproof using a DC power source. It should have a photoelectric sensor capable of measuring turbidity between 0-1000 NTU.
- 3.5.13 A portable, battery-operated echo sounder or tape measure will be used for the determination of water depth at each designated monitoring station as appropriate.
- 3.5.14 A water sampler e.g. Kahlsico Water Sampler, which is a transparent PVC cylinder with capacity not less than 2 litres, will be used for water sampling if water depth over than 0.5m. sampling from very shallow water depths e.g. <0.5 m, water sample collection will be directly from water surface below 100mm use sampling plastic bottle to avoid inclusion of bottom sediment or humus. Moreover, Teflon/stainless steel bailer or self-made sampling buckets maybe used for water sampling. The equipment used for sampling will be depended the sampling location and depth situations.
- 3.5.15 Water samples for laboratory measurement of SS will be collected in high density polythene bottles, packed in ice (cooled to 4 °C without being frozen), and delivered to the laboratory in the same day as the samples were collected.
- 3.5.16 Analysis of suspended solids should be carried out in a HOKLAS or other accredited laboratory. Water samples of about 1L should be collected at the monitoring stations for carrying out the laboratory suspended solids determination. The SS determination work should start within 24 hours after collection of the water samples. The SS analyses should follow the *APHA Standard* Methods 2540D with Limit of Reporting of 2 mg/L.
- 3.5.17 Water quality monitoring equipment used in the impact monitoring is listed in Table 3-7. Suspended solids (SS) analysis is carried out by a local HOKLAS-accredited laboratory, namely ALS Technichem (HK) Pty Ltd.

Table 3-7 Water Quality Monitoring Equipment

Equipment	Model
Water Depth Detector	Eagle Sonar or tape measures
Water Sampler	A 2-litre transparent PVC cylinder with latex cups at both ends or

Equipment	Model	
	teflon/stainless steel bailer or self-made sampling bucket	
Thermometer & DO	YSI Professional Plus / YSI 6820/650MDS / YSI PRO20 Handheld	
meter	Dissolved Oxygen Instrument / YSI 550A Multifunctional Meter	
pH meter	AZ8685 pH pen-style meter / YSI Professional Plus / YSI	
ph meter	6820/650MDS	
Turbidimeter	Hach 2100Q	
Sample Container	High density polythene bottles (provided by laboratory)	
Storage Container	'Willow' 33-liter plastic cool box with Ice pad	

3.6 MONITORING METHODOLOGY

1-hour TSP Monitoring

- 3.6.1 The 1-hour TSP monitor was a brand named "Sibata LD-3B Laser Dust monitor Particle Mass Profiler & Counter" which is a portable, battery-operated laser photometer. The 1-hour TSP meter provides a real time 1-hour TSP measurement based on 90° light scattering. The 1-hour TSP monitor consists of the following:
 - (a.) A pump to draw sample aerosol through the optic chamber where TSP is measured;
 - (b.) A sheath air system to isolate the aerosol in the chamber to keep the optics clean for maximum reliability; and
 - (c.) A built-in data logger compatible with Windows based program to facilitate data collection, analysis and reporting.
- 3.6.2 The 1-hour TSP meter is used within the valid period as follow manufacturer's Operation and Service Manual.

24-hour TSP Monitoring

- 3.6.3 The equipment used for 24-hour TSP measurement is Tisch Environmental, Inc. Model TE-5170 TSP high volume air sampling system, which complied with *EPA Code of Federal Regulation*, *Appendix B to Part 50*. The High Volume Air Sampler (HVS) consists of the following:
 - (a.) An anodized aluminum shelter;
 - (b.) A 8"x10" stainless steel filter holder;
 - (c.) A blower motor assembly;
 - (d.) A continuous flow/pressure recorder;
 - (e.) A motor speed-voltage control/elapsed time indicator;
 - (f.) A 7-day mechanical timer, and
 - (g.) A power supply of 220v/50 Hz
- 3.6.4 The HVS is operated and calibrated on a regular basis in accordance with the manufacturer's instruction using Tisch Calibration Kit Model TE-5025A. Calibration would carry out in two month interval.
- 3.6.5 24-hour TSP is collected by the ET on filters of HVS and quantified by a local HOKLAS accredited laboratory, ALS Technichem (HK) Pty Ltd (ALS), upon receipt of the samples. The ET keep all the sampled 24-hour TSP filters in normal air conditioned room conditions, i.e. 70% RH (Relative Humidity) and 25°C, for six months prior to disposal.

Noise Monitoring

- 3.6.6 Noise measurements were taken in terms of the A-weighted equivalent sound pressure level (L_{eq}) measured in decibels dB(A). Supplementary statistical results (L_{10} and L_{90}) were also obtained for reference.
- 3.6.7 During the monitoring, all noise measurements were performed with the meter set to FAST response and on the A-weighted equivalent continuous sound pressure level (L_{eq}). Leq_(30min) in six

consecutive $Leq_{(5min)}$ measurements were used as the monitoring parameter for the time period between 0700-1900 hours on weekdays; and also $Leq_{(15min)}$ in three consecutive $Leq_{(5min)}$ measurements is used as monitoring parameter for other time periods (e.g. during restricted hours), if necessary.

3.6.8 Prior of noise measurement, the accuracy of the sound level meter is checked using an acoustic calibrator generating a known sound pressure level at a known frequency. The checking was performed before and after the noise measurement.

Water Quality

(November 2015 to January 2016)

3.6.9 Water quality monitoring is conducted at the designated locations. The sampling produce with the in-situ monitoring are presented as below:

Sampling Procedure

- 3.6.10 A Digital Global Positioning System (GPS) is used to identify the designated monitoring stations prior to water sampling. A portable, battery-operated echo sounder is used for the determination of water depth at each station. At each station, water sample would be collected from 0.1m below water surface or the water surface to prevent the river bed sediment for stirring.
- 3.6.11 The sample container will be rinsed with a portion of the water sample. The water sample then will be transferred to the high-density polythene bottles as provided by the laboratory, labeled with a unique sample number and sealed with a screw cap.
- 3.6.12 Before sampling, general information such as the date and time of sampling, weather condition as well as the personnel responsible for the monitoring would be recorded on the field data sheet.
- 3.6.13 A 'Willow' 33-liter plastic cool box packed with ice will be used to preserve the water samples prior to arrival at the laboratory for chemical determination. The water temperature of the cool box is maintained at a temperature as close to 4^oC as possible without being frozen. Samples collected are delivered to the laboratory upon collection.

In-situ Measurement

- 3.6.14 Instrument including YSI Professional Plus or YSI 6820/650MDS or YSI PRO20 Handheld Dissolved Oxygen Instrument or YSI 550A Multifunctional Meter is used for water in-situ measures, which automates the measurements and data logging of temperature, dissolved oxygen and dissolved oxygen saturation. Before each round of monitoring, the dissolved oxygen probe would be calibrated by the wet bulb method.
- 3.6.15 A portable AZ8685 pH pen-style meter or YSI Professional Plus or YSI 6820/650MDS is used for in-situ pH measurement. The pH meter is capable of measuring pH in the range of 0 14 and readable to 0.1.
- 3.6.16 A portable Hach 2100Q Turbidimeter or YSI Professional Plus or YSI 6820/650MDS is used for in-situ turbidity measurement. The turbidity meter is capable of measuring turbidity in the range of 0 1000 NTU. StablCal[®] Standards of known NTU are used for calibration of the instrument before and after measurement.
- 3.6.17 All in-situ measurement equipment are calibrated by HOKLAS accredited laboratory of three month interval.

Laboratory Analysis

3.6.18 All water samples are analyzed with Suspended Solids (SS) as specified in the *EM&A Manual* by a local HOKLAS-accredited testing laboratory (ALS Technichem (HK) Pty Ltd HOKLAS registration no. 66). SS analysis is determined by the laboratory upon receipt of the water samples using *APHA Standard Methods* 2540D (namely ALS Method EA-025 as accredited

HOKLAS Scheme) started within 48 hours of water sample receipt.

3.7 EQUIPMENT CALIBRATION

- 3.7.1 Calibration of the HVS is performed upon installation and thereafter at bimonthly intervals in accordance with the manufacturer's instruction using the certified standard calibrator (TISCH Model TE-5025A). Moreover, the Calibration Kit would be calibrated annually. The calibration data are properly documented and the records are maintained by ET for future reference.
- 3.7.2 The 1-hour TSP meter was calibrated by the supplier prior to purchase. Zero response of the equipment would be checked before and after each monitoring event. Annually calibration with the High Volume Sampler (HVS) in same condition would be undertaken by the Laboratory.
- 3.7.3 The sound level meter and calibrator are calibrated and certified by a laboratory accredited under HOKLAS or any other international accreditation scheme at yearly basis.
- 3.7.4 All water quality monitoring equipment is calibrated by HOKLAS accredited laboratory of three month intervals.
- 3.7.5 The calibration certificates of all monitoring equipment used for the impact monitoring program in the Reporting Period and the HOKLAS accredited certificate of laboratory are presented in the relevant monthly EM&A reports.

3.8 DERIVATION OF ACTION/LIMIT (A/L) LEVELS

3.8.1 The baseline results form the basis for determining the environmental acceptance criteria for the impact monitoring. According to the approved Environmental Monitoring and Audit Manual, the air quality, construction noise and water quality criteria were set up, namely Action and Limit levels are listed in *Tables 3-8*, *3-9* and *3-10*.

Table 3-8 Action and Limit Levels for Air Quality Monitoring

Monitoring Station	Action 1	Action Level (μg /m³)		Limit Level (µg/m³)	
Monitoring Station	1-hour TSP	24-hour TSP	1-hour TSP	24-hour TSP	
AM1/ AM1a	265	143			
AM2	268	149			
AM3	269	145			
AM4a / AM4b	267	148			
AM5 / AM5a	268	143	500	260	
AM6	269	148			
AM7a / AM7b	275	156			
AM8	269	144			
AM9a / AM9b	271	151			

Table 3-9 Action and Limit Levels for Construction Noise

Monitoring Location	Action Level	Limit Level in dB(A)	
Withintoning Location	Time Period: 0700-1900 hours on normal weekdays		
NM1, NM2, NM3, NM4, NM5, NM6, NM7, NM8, NM9, NM10	When one or more documented complaints are received	75 dB(A) ^{Note 1 & Note 2}	

Note 1: Acceptable Noise Levels for school should be reduced to 70 dB(A) and 65 dB(A) during examination period

Note 2: If works are to be carried out during restricted hours, the conditions stipulated in the construction noise permit issued by the NCA have to be followed.

Table 3-10 Action and Limit Levels for Water Quality

Parameter	Performance		Mo	onitoring Loca	nitoring Location

SS (mg/L)	I imit I amal	64.9	17.3	12.4	12.9	45.5				
	Limit Level	AND	130% of ups	tream control s	tation of the	same day				

Remarks:

3.8.2 Should non-compliance of the environmental quality criteria occurs, remedial actions will be triggered according to the Event and Action Plan which presented in *Appendix F*.

3.9 DATA MANAGEMENT AND DATA QA/QC CONTROL

- 3.9.1 All monitoring data will be handled by the ET's in-house data recording and management system. The monitoring data recorded in the equipment will be downloaded directly from the equipment at the end of each monitoring day. The downloaded monitoring data will input into a computerized database properly maintained by the ET. The laboratory results will be input directly into the computerized database and checked by personnel other than those who input the data.
- 3.9.2 For monitoring parameters that require laboratory analysis, the local laboratory shall follow the QA/QC requirements as set out under the HOKLAS scheme for the relevant laboratory tests.

^(*) The Proposed Action Level of Dissolved Oxygen is adopted to be used 5%-ile of baseline data

^(**) The Proposed Action & Limit Level of Dissolved Oxygen is used 4mg/L

The Proposed Limit Level of Dissolved Oxygen is adopted to be used 1%-ile of baseline data

4 AIR QUALITY MONITORING

4.1 GENERAL

4.1.1 In the Reporting Period, construction works under the project have been commenced in Contracts 2, 3, 5, 6 and Contract SS C505 and air quality monitoring was performed at all designated locations.

4.2 SUMMARY OF MONITORING RESULTS

- 4.2.1 In the Reporting Period, the 24-hour TSP monitoring at AM3 on 27 November 2015 was failure due to malfunction of HVS. After intense checking, it was found that the motor of the HVS was damaged due to over-consuming and it has been replaced on 2 December 2015. The 24-hour TSP monitoring was resumed on 3 December 2015 following the monitoring schedule.
- 4.2.2 Summary of air quality monitoring results during the Reporting Period are tabulated in *Table 4-1*. The relevant graphical plots throughout the Reporting Period are presented in *Appendix G*.

AMOb	Action Level	0	0	0
AM9b	Limit Level	0	0	0

- 4.2.4 In the Reporting Period, no exceedances were recorded for 1-hour and 24-hour TSP. No corrective measures were therefore required.
- 4.2.5 The summary of weather conditions during the Reporting Period is presented in *Appendix H*.

5 CONSTRUCTION NOISE MONITORING

5.1 GENERAL

5.1.1 In the Reporting Period, construction works under the project have been commenced in Contracts 2, 3, 5, 6 and Contract SS C505 and noise monitoring was performed at all designated locations.

5.2 SUMMARY OF MONITORING RESULTS

- 5.2.1 The sound level meter was set in 1m from the exterior of the building façade including noise monitoring locations NM1, NM2, NM3, NM4, NM5, NM6, NM7, NM8 and NM9. No façade correction (+3 dB(A) is added according to acoustical principles and EPD guidelines. However, free-field status is performed at NM10 and façade correction (+3 dB(A) has added according to the requirement.
- 5.2.2 Summary of noise monitoring results during the Reporting Period are tabulated in *Table 5-1*. The relevant graphical plots throughout the Reporting Period are presented in *Appendix G*.

Table 5-1 Summary of Construction Noise Monitoring Results

NM4	0		

Station	Limit Level	Action Level	Received Date
NM5	0		
NM6	0		
NM7	0		
NM8	0		
NM9	0		
NM10	1		

- 5.2.4 In this Reporting Period, one (1) Limit Level exceedance was recorded at NM10 on 14 November 2015. NOE was issued to relevant parties upon confirmation of the monitoring result. Furthermore, there were no noise complaints (Action Level exceedance) received by the RE, Contractors or CEDD in the Reporting Period.
- 5.2.5 Investigation report for the cause of exceedance was conducted by the ET and the result revealed that the exceedance was caused by cumulated noise of the Contract and nearby construction activities of other project. To minimize the construction noise impact, The Contractor was advised to adopt good site practice as mitigation measure as far as practicable.

6 WATER QUALITY MONITORING

6.1 GENERAL

6.1.1 In the Reporting Period, construction works under the project has been commenced in Contracts 2, 3, 5, 6 and Contract SS C505 and water quality monitoring was performed at all designated locations.

6.2 SUMMARY OF MONITORING RESULTS

6.2.1 Summary of monitoring results during the Reporting Period are tabulated in *Tables 6-1 and 6-4*. The relevant graphical plots throughout the Reporting Period are presented in *Appendix G*. In accordance with "*Event and Action Plan*", the water quality monitoring frequency shall be increased to daily when exceedance recorded at the exceeded monitoring location. With effective from January 2016, one (1) and seven (7) additional days water monitoring were conducted at WM2A and WM2B respectively.

- 6.2.3 In the Reporting Period, a total of seventy-nine (79) Action/ Limit Level exceedances namely 42 exceedances of turbidity and 37 exceedances of SS were recorded. NOEs were issued to relevant parties upon confirmation of the results.
- 6.2.4 Investigation reports for the exceedance were conducted by the ET and the investigation results are summarized in *Table 6-6*. The detailed investigation reports have been presented in the relevant monthly EM&A reports.

Table 6-6 Summary of Water Quality Exceedance in the Reporting Period

Exceedance Day	Location	Exceeded Parameter	Cause of Water Quality Exceedance		
2, 6 and 10 Nov 2015	WM2A	NTU & SS	Exceedances were due to turbid water generated by the falling water impacted the river bed soil at the outfall. The Contractor has modified the outfall location on 11 Nov 2015.		
4, 6 and 10 Nov 2015	WM2B	NTU & SS	Exceedances were due to shallow water and disturbance of sediment at the channel bed and not related to the project .		
16 Nov 15	WM2A	NTU & SS	Exceedances were a single event due to rain and <u>not</u> <u>related to the project</u> .		
12 Nov 2015	WM2B	NTU	Exceedances were due to shallow water and disturbance of		
14 Nov 2015	WM2B	NTU & SS	sediment at the channel bed and not related to the project .		
26 and 28 Nov 2015	WM2B	NTU & SS			
1 Dec 2015	WM1	NTU & SS	Exceedances were a single event and not related to the works under the project.

Dec 2013			and not related to the works under the project.
7 and 11 Dec	3373.42 A	NITH I O CC	No wastewater generated and discharge and runoff from
2015	WM2A	NTU & SS	the site and it is considered that the exceedances were not
			likely due to the project.
9 Dec 2015	WM3	NTU & SS	Exceedances were due to rainstorm and not related to the
2.4 and 7.Dag			works under the project. Exceedances were due to shallow water and disturbance of
2, 4 and 7 Dec 2015	WM2B	NTU & SS	sediment at the channel bed and not related to the project .
2013			
9 Dec 2015	WM2B	NTU & SS	Exceedances were <u>due to muddy runoff during heavy</u>
			rain. The Contractor was advised to improve the capacity
15 Dec 2015	WM2B	NTU & SS	of the pit and construct temporary drainage channel to collect the site runoff.
17 10 21 and			Exceedances were due to shallow water and disturbance of
17, 19, 21 and 23 Dec 2015	WM2B	NTU & SS	sediment at the channel bed and not related to the project .
23 Dec 2013			
			Exceedances were <u>due to muddy runoff during heavy</u> <u>rain</u> . The Contractor was advised to improve the capacity
31 Dec 2015	WM2B	NTU & SS	
			of the pit and construct temporary drainage channel to collect the site runoff.
			The exceedances were related to Contract 6 when the
			Contractor conducted channel cleaning for sediment
			and muddy water removal after rainfall. Mitigation
2-Jan-16	WM2B	NTU & SS	measures such as sump pit with temporary channel were
2-3411-10	WWIZD	1110 & 33	constructed under the slope to divert the muddy runoff.
			Enhance work such as hydro-seeding was applied at the
			stabilized slope in late January 2016.
			The implemented mitigation measures and capacity of
			sump pits by Contract 6 were not sufficient to cater the
	WM2B		muddy runoff from site uphill. Mitigation measures
6-Jan-16		NTU & SS	such as sump pit with temporary channel were constructed
		1110 & 55	under the slope to divert the muddy runoff. Enhance
			work such as hydro-seeding was applied at the stabilized
			slope in late January 2016.
			The exceedances were due to the shallow water and the
7-Jan-16	WM2B	NTU	disturbance of sediment at river bed and it unlikely related
		1110	to the works under Contract 6.
			The exceedances were due to the shallow water and the
8-Jan-16	WM2B	NTU & SS	disturbance of sediment at river bed and it unlikely related
			to the works under the Contract 6.
			The exceedances were due to the shallow water and the
11-Jan-16	WM2B	NTU	disturbance of sediment at river bed and it unlikely related
			to the works under Contract 6.
			The implemented mitigation measures and capacity of
	WM2B	NTU & SS	sump pits by Contract 6 were not sufficient to cater the
12-Jan-16			muddy runoff from site uphill. Mitigation measures
			such as sump pit with temporary channel were constructed
			under the slope to divert the muddy runoff. Enhance
			work such as hydro-seeding was applied at the stabilized
			slope in late January 2016.
			The exceedance was a single incident due to rainstorm and
15-Jan-16	WM4	NTU	unlikely related to the works under the Contracts 2 and
			<u>3</u> .
			Current mitigation measures provided by Contract 6
16-Jan-16	WM2A	NTU & SS	such covering the opened slope are not sufficient to cope
			with site runoff especially when raining. Construction

			of bund along the riverside has been undertaking since 3 February 2016 at the works area of Bridge D.		
	WM2B	NTU & SS	The exceedances were likely related to contribution of muddy runoff from the public road surface and <u>unlikely</u> related to the works under Contract 6.		
		NTU & SS	Current mitigation measures provided by Contract 6		
			such covering the opened slope are not sufficient to cope		
	WM2A		with site runoff especially when raining. Construction		
18-Jan-16			of bund along the riverside has been undertaking since 3		
10-3411-10			February 2016 at the works area of Bridge D.		
	WM2B	NTU & SS	The exceedances were likely related to contribution of

			related to the works under Contract 6.		
	WM2B	NTU & SS	Current mitigation measures provided by Contract 6		
			were not adequate to cater the large amount of storm		
28-Jan-16			runoff during rainstorm. The Contractor has newly		
			constructed a sump pit to collect the muddy runoff on 4		
			February 2016.		
	WM2B	NTU & SS	Current mitigation measures provided by Contract 6		
29-Jan-16			were not adequate to cater the large amount of storm		
			runoff during rainstorm. The Contractor has newly		
			constructed a sump pit to collect the muddy runoff on 4		
			February 2016.		

6.2.5 The summary of weather conditions during the Reporting Period is presented in *Appendix H*.

7 WASTE MANAGEMENT

7.1 GENERAL WASTE MANAGEMENT

7.1.1 Waste management was carried out by an on-site Environmental Officer or an Environmental Supervisor from time to time.

7.2 RECORDS OF WASTE QUANTITIES

- 7.2.1 All types of waste arising from the construction work are classified into the following:
 - Construction & Demolition (C&D) Material;
 - Chemical Waste;
 - General Refuse
- 7.2.2 Whenever possible, materials were reused on-site as far as practicable. The quantities of waste for disposal in the Reporting Period are summarized in *Tables 7-1* and *7-2* and the Waste Flow Table is presented in *Appendix I*.

Table 7-1 Summary of Quantities of Inert C&D Materials

TD 6337 4	Contract	Quantity				Disposal
Type of Waste	No	Nov 15	Dec 15	Jan 16	Total	Location
	2	46.3947	50.4888	74.4242	200.05	-
	3	2.99	3.158	2.43		-

	6	0.594	0.08	0.695		
	SS C505	0.052	0.111	0.072		

Remark #: Unit of recycled metal, recycled paper/ cardboard packing, recycled plastic and chemical waste for Contractor 3 was in ('000m³).

7.2.3 To control the site performance on waste management, the Contractor shall ensure that all solid and liquid waste management works are fully in compliance with the relevant license/permit requirements, such as the effluent discharge license and the chemical waste producer registration. The Contractor is also reminded to implement the recommended environmental mitigation measures according to the Environmental Monitoring and Audit Manual.

8 SITE INSPECTIONS

8.1 REQUIREMENTS

8.1.1 According to the approved EM&A Manual, the environmental site inspection shall be formulation by ET Leader. Weekly environmental site inspections should carry out to confirm the environmental performance.

Contract 2

8.1.2 During the Reporting Period, *13* events of the joint site inspections were undertaken at Contract 2 to evaluate the site environmental performance. The summaries of the findings during site inspection are presented in *Table 8-1* and the details of site inspection can be found in relevant EM&A monthly report.

Table 8-1 Summary of Reminders/Observations of Site Inspection – Contract 2

Reporting Period	Date of site inspection	Nos. of findings / reminders	Follow-Up Status
November 2015	6, 13, 20 and 26 November 2015	6	Completed
December 2015	4, 11, 18, 23 and 30 December 2015	5	Completed
January 2016	8, 15, 22 and 29 January 2016	7	Completed

8.1.3 In the Reporting Period, no non-compliance was recorded; however, 8 observations/ reminders were recorded during the site inspections. Minor deficiencies found in the weekly site inspection were in general rectified within the specified deadlines. The environmental performance of the Project was therefore considered satisfactory.

Contract 3

8.1.4 During the Reporting Period, *13* events of the joint site inspections were undertaken at Contract 3 to evaluate the site environmental performance. The summaries of the findings during site inspection are presented in *Table 8-2* and the details of site inspection can be found in relevant EM&A monthly report.

Table 8-2 Summary of Reminders/Observations of Site Inspection – Contract 3

Reporting Period	Date of site inspection	Nos. of findings / reminders	Follow-Up Status
November 2015	2, 9, 18, 23 and 30 November 2015	7	Completed
December 2015	7, 16, 21 and 28 December 2015	9	Completed
January 2016	4, 11, 20 and 25 January 2016	4	Completed

8.1.5 In the Reporting Period, no non-compliance was recorded; however, 22 observations/ reminders were recorded during the site inspections. Minor deficiencies found in the weekly site inspection were in general rectified within the specified deadlines. The environmental performance of the Project was therefore considered satisfactory.

Contract 5

8.1.6 During the Reporting Period, *13* events of the joint site inspections were undertaken at Contract 5 to evaluate the site environmental performance. The summaries of the findings during site inspection are presented in *Table 8-3* and the details of site inspection can be found in relevant EM&A monthly report.

Table 8-3 Summary of Reminders/Observations of Site Inspection – Contract 5

Reporting Period	Date of site inspection	Nos. of findings / reminders	Follow-Up Status
November 2015	5, 12, 19 and 26 November 2015	2	Completed
December 2015	3, 10, 16, 24 and 31 December 2015	7	Completed
January 2016	7, 12, 19 and 26 January 2016	3	Completed

8.1.7 In the Reporting Period, no non-compliance was recorded; however, *11* observations/ reminders were recorded during the site inspections. Minor deficiencies found in the weekly site inspection were in general rectified within the specified deadlines. The environmental performance of the Project was therefore considered satisfactory.

Contract 6

8.1.8 During the Reporting Period, *13* events of the joint site inspections were undertaken at Contract 6 to evaluate the site environmental performance. The summaries of the findings during site inspection are presented in *Table 8-4* and the details of site inspection can be found in relevant EM&A monthly report.

Table 8-4 Summary of Reminders/Observations of Site Inspection – Contract 5

Reporting Period	Date of site inspection	Nos. of findings / reminders	Follow-Up Status
November 2015	6, 13, 20 and 27 November 2015	13	Completed
December 2015	3, 10, 17, 23 and 30 December 2015	18	Completed
January 2016	7, 14, 21 and 28 January 2016.	12	Completed

8.1.9 In the Reporting Period, no non-compliance was recorded; however, *10* observations/ reminders were recorded during the site inspections. Minor deficiencies found in the weekly site inspection were in general rectified within the specified deadlines. The environmental performance of the Project was therefore considered satisfactory.

Contract SS C505

8.1.10 During the Reporting Period, *13* events of the joint site inspections were undertaken at Contract SS C505 to evaluate the site environmental performance. The summaries of the findings during site inspection are presented in *Table 8-5* and the details of site inspection can be found in relevant EM&A monthly report.

Table 8-5 Summary of Reminders/Observations of Site Inspection – Contract SS C505

Reporting Period	Date of site inspection	Nos. of findings / reminders	Follow-Up Status
November 2015	4, 11, 18 and 25 November 2015	7	Completed
December 2015	2, 9, 16, 23 and 30 December 2015	6	Completed
January 2016	6, 13, 20 and 27 January 2016	7	Completed

8.1.11 In the Reporting Period, no non-compliance was recorded; however, *16* observations/ reminders were recorded during the site inspections. Minor deficiencies found in the weekly site inspection were in general rectified within the specified deadlines. The environmental performance of the Project was therefore considered satisfactory.

Contract 7

8.1.12 Although construction activities under *Contract* 7 have not yet commenced, site preparation work was conducted. In the Reporting Period, 2 events of the joint site inspections were undertaken at Contract 7 to evaluate the site environmental performance. The summaries of the findings during site inspection are presented in *Table 8-6* and the details of site inspection can be found in relevant EM&A monthly report.

Table 8-6 Summary of Reminders/Observations of Site Inspection – Contract 7

Reporting Period	Date of site inspection	Nos. of findings / reminders	Follow-Up Status
January 2016	5 and 26 January 2016	1	Completed

8.1.13 In the Reporting Period, no non-compliance was recorded; however, *I* observation/reminder was recorded during the site inspections. Minor deficiencies found in the weekly site inspection were in general rectified within the specified deadlines. The environmental performance of the Project was therefore considered satisfactory.

Other Contracts

8.1.14 Since the construction works at the Contract 4 are not yet commenced, no site inspection is performed for these Contracts.

9 NON-COMPLIANCE, COMPLAINTS, NOTIFICATIONS OF SUMMONS AND SUCCESSFUL PROSECUTIONS

9.1 NON-COMPLIANCE

- 9.1.1 In the Reporting Period, no summons and prosecution under the EM&A Programme was lodged for the Project. However, one (1) verbal and five (5) documented environmental complaints were received and lodged for Contracts 6. Follow up actions have been undertaking by the Contractor to resolve the deficiencies. The details of complaint are listed below:-
 - 6 and 10 November 2015 the complainant complained that the construction work caused water pollution to Ping Yuen River, which seriously polluted the water environment and the farm and cropping owned by the complainant. The complainant hopes the related department immediately rectified the deficiency immediately.
 - 1 December 2015 EPD received a complaint from a villager in Ping Yeung Village which adjacent to the construction site of Bridge C under Contract 6 regarding the dust emission.
 - 16 December 2015 A public complaint was received by EPD regarding muddy water discharge at Bridge C to a fish pond nearby.
 - 4 January 2016 A land user of the farm located at junction of Ng Chow Road and Wo Keng Shan Road notified the Contractor of C6 (CCKJV) that muddy water was observed in the his land area. It was suspected that the muddy water was discharged from the construction site of C6.
 - 14 January 2016 A complaint was received by EPD regarding the soil/ muddy water brought by the vehicle when leaving the construction site. The soil/ muddy water were cumulated at the road and this situation has been observed for a long period of time. It was suspected that the wheel washing facilities of the construction site was not in proper function and follow up action is required.
 - 20 January 2016 A complaint was received from EPD regarding soil/ muddy water gushed out from the construction site and getting into his village house area. In view of the complaint location and confirmed with the Contractor, this complaint is related to the accident of burst pump pipe from a recirculation tank during the bored piling work at Bridge B happened on 4 January 2016, which causing muddy water leaked from the works area to the nearby village house area.
- 9.1.2 Upon receipt of the complaint, follow up action has been undertaken by both Contractor promptly to resolve the complaints and deficiencies. During the complaint investigation work, the Contractor was co-operated with the ET in providing all the necessary information and assistance for completion of the investigation. The investigation reports conducted by the ET were submitted to relevant parties.

9.2 Environmental Complaint, Summons and Prosecution

- 9.2.1 In the Reporting Period, no environmental complaints, summons and prosecution under the EM&A Programme was lodged.
- 9.2.2 The statistical summary table of environmental complaint, summons and prosecution are presented in **Tables 9-1, 9-2** and **9-3**.

 Table 9-1
 Statistical Summary of Environmental Complaints

			Environmental Complaint Statistics				
Contract No			Complaint Nature				
	Nov 2015	0		• (6) Water Quality			
2	Dec 2015	0	13	• (5) Construction Dust			
	Jan 2016	0		• (2) Noise			
	Nov 2015	0		• (1) Construction Dust			
3	Dec 2015	0	3	(1) Construction Dust(2) Water quality			
	Jan 2016	0		(2) Water quanty			
	Nov 2015	0					
5	Dec 2015	0	2	• (2) Construction Dust			
	Jan 2016	0					
	Nov 2015	1		• (5) Water Quality			
6	Dec 2015	2	6	(5) Water Quality(1) construction Dust			
	Jan 2016	3		(1) constituction Dust			
	Nov 2015	0					
SS C505	Dec 2015	0	0	0 N/A	N/A		
	Jan 2016	0					

 Table 9-2
 Statistical Summary of Environmental Summons

			Environmental Summ	ons Statis	stics

No	Period	Frequency commencement of project	Water	Air	Noise		
	Dec 2015	0		0	0	0	
	Nov 2015	0		0	0	0	
5	Dec 2015	0	0	0	0	0	
	Nov 2015	0		0	0	0	
	Dec 2015	0		0	0	0	
6	Nov 2015	0	0	0	0	0	
	Dec 2015	0		0	0	0	
	Nov 2015	0		0	0	0	
SS C505	Dec 2015	0	0	0	0	0	
	Nov 2015	0		0	0	0	

9.2.3 Since the construction works at the Contract 4 and Contract 7 are not yet commenced, no environmental complaint, summons and prosecution are received in the Reporting Period accordingly.

Warning Letter

9.2.4 A warning letter from EPD was issued to Contract 6 on 1 February 2016 regarding Non Compliance (NC) with APCO for the non-covered dump trucks travelling to Fill Bank at TM Area 38 on 14 and 18 January 2016 respectively. The Contractor has explained to the EPD that all dump trucks under the Contract were well covered before leaving the site, however, some drivers of the dump trucks immediately opened the cover when they just get into Fill Bank at TM Area 38 and captured by the CCTV. A briefing and warning letter has given to the relevant drivers to prevent reoccurrence of similar case.

10 IMPLEMENTATION STATUS OF MITIGATION MEASURES

10.1 GENERAL REQUIREMENTS

- 10.1.1 The environmental mitigation measures that recommended in the Implementation Schedule for Environmental Mitigation Measures (ISEMM) in the approved EM&A Manual covered the issues of dust, noise, water and waste and they are summarized presented in *Appendix J*.
- 10.1.2 All contracts under the Project shall be implementing the required environmental mitigation measures according to the approved EM&A Manual as subject to the site condition. Environmental mitigation measures generally implemented by Contracts 2, 3, 5, 6 and SS C505 in this Reporting Period are summarized in *Table 10-1*.

 Table 10-1
 Environmental Mitigation Measures

Issues	Environmental Mitigation Measures
Water Quality	Wastewater to be treated by the filtration systems i.e. sedimentation tank or
	AquaSed before to discharge.
Air Quality	Maintain damp / wet surface on access road
	Keep slow speed in the sites
	All vehicles must use wheel washing facility before off site
	Sprayed water during breaking works
	A cleaning truck was regularly performed on the public road to prevent
	fugitive dust emission
Noise	• Restrain operation time of plants from 07:00 to 19:00 on any working day
	except for Public Holiday and Sunday.
	Keep good maintenance of plants
	Place noisy plants away from residence or school
	Provide noise barriers or hoarding to enclose the noisy plants or works
	Shut down the plants when not in used.
Waste and	On-site sorting prior to disposal
Chemical	Follow requirements and procedures of the "Trip-ticket System"
Management	Predict required quantity of concrete accurately
	Collect the unused fresh concrete at designated locations in the sites for
	subsequent disposal
General	The site was generally kept tidy and clean.

11 CONCLUSIONS AND RECOMMENDATIONS

11.1 CONCLUSIONS

- 11.1.1 This is the 10th Quarterly EM&A Summary Report presenting the monitoring results and inspection findings for the Reporting Period from 1 November 2015 to 31 January 2016.
- 11.1.2 For air quality monitoring, no 1-hour and 24-hour TSP monitoring results triggered the Action or Limit Levels were recorded. No NOEs or the associated corrective actions were therefore issued.
- 11.1.3 No noise complaint (which is an Action Level exceedance) was received. However, one Limit Level exceedance of construction noise was recorded in the Reporting Period. The investigation report for cause of exceedance was conducted by ET and submitted to relevant parties.
- 11.1.4 For water quality monitoring, a total of seventy-nine (79) Action/ Limit Level exceedances namely 42 exceedances of turbidity and 37 exceedances of SS were recorded. NOEs were issued to relevant parties upon confirmation of the results. The investigation reports for cause of exceedances were conducted by ET and submitted to relevant parties.
- 11.1.5 During the Reporting Period, weekly joint site inspections for Contract 2, Contract 3, Contract 5, Contract 6, Contract 7 and Contract SS C505 were undertaken to evaluate the site environmental performance. No non-compliances were observed during the weekly site inspection and environmental audit of the Reporting Period, indicating the implemented mitigation measures for air quality, construction noise and water quality were effective. Minor deficiencies found in the weekly site inspection were in general rectified within the specified deadlines. The environmental performance of the Project was therefore considered satisfactory.
- 11.1.6 In this Reporting Period, one (1) verbal and five (5) documented environmental complaints were received and lodged for Contracts 6. Follow up actions have been undertaking by the Contractor to resolve the deficiencies. The investigation reports conducted by the ET were submitted to relevant parties.
- 11.1.7 No environmental summons or successful prosecutions were recorded in the Reporting Period. However, a warning letter from EPD was issued to Contract 6 on 1 February 2016 regarding Non Compliance (NC) with APCO for the non-covered dump trucks travelling to Fill Bank at TM Area 38 on 14 and 18 January 2016 respectively. As advised by the Contractor, a briefing and warning letter has given to the relevant drivers to prevent reoccurrence of similar case.

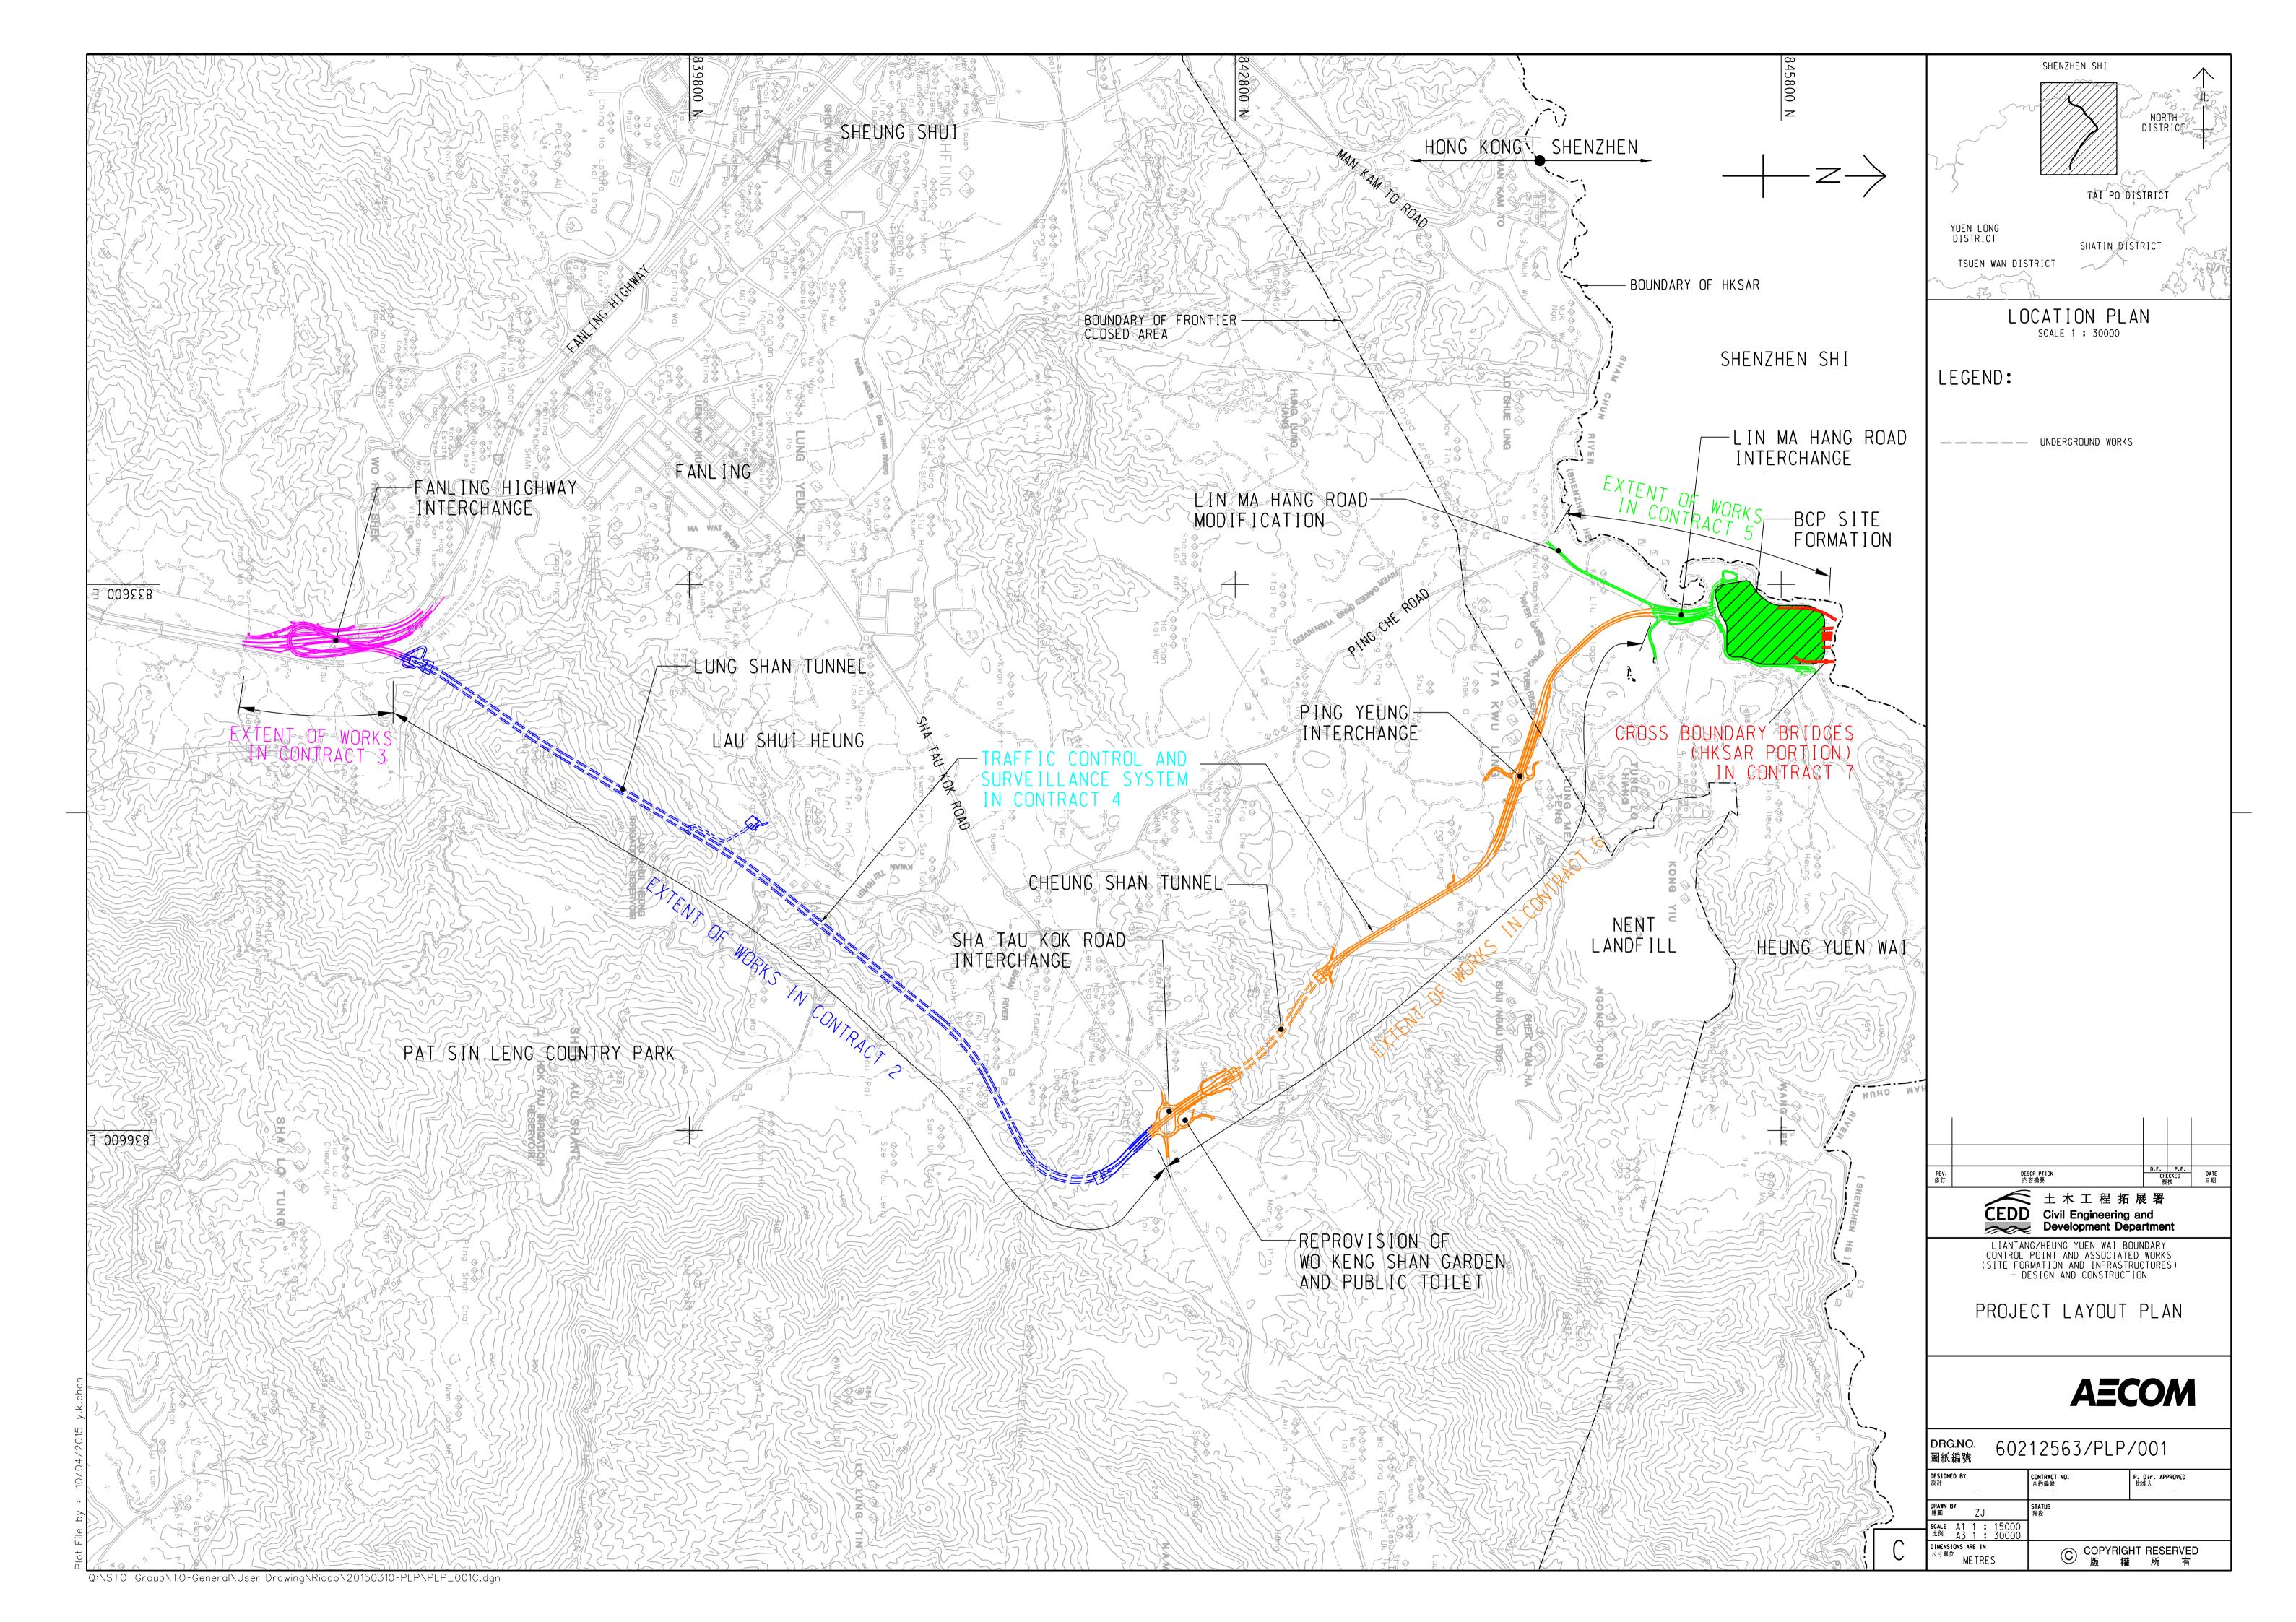

11.2 RECOMMENDATIONS

- 11.2.1 During dry season, special attention should be paid on the potential construction dust impact since most of the construction sites are adjacent to villages. The Contractor should fully implement the construction dust mitigation measures properly.
- 11.2.2 The Contractor was also reminded to prevent muddy water or other water pollutants from site surface flow to local stream such as Kong Yiu Channel and Ma Wat Channel or public area. Water quality mitigation measures to prevent surface runoff into nearby water bodies or public areas should paid attention and fully implemented.
- 11.2.3 Construction noise would be a key environmental issue during construction work of the Project. Noise mitigation measures such as using quiet plants should be implemented in accordance with the EM&A requirement.

If exceedance continues, consider what portion of the work is responsible and instruct the Contractor to stop that portion of work until the exceedance is abated.	under control; 5. Stop the relevant portion of works as determined by the ER until the exceedance is abated.

Event and Action Plan for Construction Noise

Event	ET	IEC	ER	Action Contractor
Action Level	1. Notify ER, IEC and Contractor; 2. Carry out investigation; 3. Report the results of investigation to the IEC, ER and Contractor; 4. Discuss with the IEC and Contractor on remedial measures required; 5. Increase monitoring frequency to check mitigation effectiveness.	Review the investigation results submitted by the ET; Review the proposed remedial measures by the Contractor and advise the ER accordingly; Advise the ER on the effectiveness of the proposed remedial measures.	Confirm receipt of notification of failure in writing; Notify Contractor; In consolidation with the IEC, agree with the Contractor on the remedial measures to be implemented; Supervise the implementation of remedial measures.	Submit noise mitigation proposals to IEC and ER; Implement noise mitigation proposals.
Limit	1. Inform IEC, ER, Contractor and EPD; 2. Repeat measurements to confirm findings; 3. Increase monitoring frequency; 4. Identify source and investigate the cause of exceedance; 5. Carry out analysis of Contractor's working procedures; 6. Discuss with the IEC, Contractor and ER on remedial measures required; 7. Assess effectiveness of Contractor's remedial actions and keep IEC, EPD and ER informed of the results; 8. If exceedance stops, cease additional monitoring.	Discuss amongst ER, ET, and Contractor on the potential remedial actions; Review Contractor's remedial actions whenever necessary to assure their effectiveness and advise the ER accordingly.	1. Confirm receipt of notification of failure in writing: 2. Notify Contractor; 3. In consolidation with the IEC, agree with the Contractor on the remedial measures to be implemented; 4. Supervise the implementation of remedial measures; 5. If exceedance continues, consider stopping the Contractor to continue working on that portion of work which causes the exceedance until the exceedance is abated.	1. Take immediate action to avoid further exceedance: 2. Submit proposals for remedial actions to IEC and ER within 3 working days of notification; 3. Implement the agreed proposals; 4. Submit further proposal if problem still not under control; 5. Stop the relevant portion of works as instructed by the ER until the exceedance is abated.

Event and Action Plan for Water Quality

EVENT	ET	IEC	ER	ACTION
Action level being exceeded by one sampling day	1. Repeat in-situ measurement to confirm findings; 2. Identify reasons for non-compliance and sources of impact; 3. Inform IEC and Contractor; 4. Appendix H

Weather information

Weather Condition Extracted from HKO

The weather of November 2015

November 2015 emerged as the warmest November in Hong Kong since records began in 1884 with a record-breaking mean temperature of 24.0 degrees, 2.2 degrees above the November normal of 21.8 degrees. The anomalously warm weather was mainly attributed to the relatively high sea surface temperatures over the northern part of the South China Sea and the rather weak advection of cold air from the north despite the prevailing northeast monsoon. The month was also drier than usual with only 22.8 millimetres of rainfall, a deficit of about 39 percent as compared to the normal figure of 37.6 millimetres. The accumulated rainfall of 1810.2 millimetres since 1 January was about 24 percent below the normal figure of 2371.7 millimetres for the same period.

The weather of December 2015

With a relatively humid air mass affecting the territory for most part of the month, the weather of December 2015 was gloomier and wetter than usual. The total duration of sunshine recorded in the month was 75.9 hours, only about 44 percent of the normal figure of 172.2 hours. Two rainy episodes on 5 and 9 December mostly contributed to the monthly rainfall of 64.3 millimetres, more than double the normal figure of 26.8 millimetres. However, the annual rainfall of 1874.5 millimetres was still about 22 percent below the normal of 2398.5 millimetres. December 2015 was also warmer than usual with a monthly mean temperature of 18.6 degrees, 0.7 degrees above the normal figure of 17.9 degrees.

The weather of January 2016

January 2016 was characterized by an intense cold surge in the latter part of the month and exceptionally high monthly rainfall. The unseasonably warm weather in the first three weeks of the month was totally offset by the freezing temperatures during the 3-day period of 23 - 25 January. The mean sea level pressure of 1037.7 hectopascals on 24 January was the highest ever recorded at the Observatory. Yet the monthly averaged temperature of 16.0 degrees turned out to be deceptively unremarkable, only 0.3 degree below normal. With upper-air disturbances repeatedly affecting the south China coastal areas and bringing outbreaks of heavy rain, the Observatory recorded an all-time high monthly rainfall of 266.9 millimetres, more than ten times the January normal of 24.7 millimetres and easily breaking the previous record of 214.3 millimetres set way back in January 1887. The heavy rain on 5 January also broke the hourly rainfall record for January.

Remark: The meteorological data during the Reporting Period is presented in the relevant monthly EM&A report.

Description of mode and details of recycling if any for the month e.g. XX kg of used timber was sent to YY site for transformation into fertilizers											
4730 kg of scrap metal was sent to Yat Fung for transformation for reuse		0	0	0	0						

Notes:

- (1) The performance targets are given in the Particular Specification on Environmental Management Plan.
- (2) The waste flow table shall also include construction waste that are specified in the Contract to be imported for use at the site.
- Plastics refer to plastic bottles/containers, plastic sheets/foam from packaging material.
- (4) Broken concrete for recycling into aggregates.
- (5) If necessary, use the conversion factor: 1 full load of dumping truck being equivalent to 6.5 m³ by volume.

Appendix J

Implementation Schedule for Environmental Mitigation Measures

EIA Ref.	EM&A Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measure	Who to implement the	Location of the measure	When to implement the	What requirements or standards for the measure to
	Her.		& Main Concerns to address	measure?	illeasure	measure?	achieve?
Air Quali	ty Impact (Construction)					
3.6.1.1	2.1	 General Dust Control Measures The following dust suppression measures should be implemented: Frequent water spraying for active construction areas (4 times per day for active areas in Po Kak Tsai and 8 times per day for all other active areas), including areas with heavy construction and slope cutting activities 80% of stockpile areas should be covered by impervious sheets Speed of trucks within the site should be controlled to about 10 km/hr All haul roads within the site should be paved to avoid dust 	To minimize adverse dust emission generated from various construction activities of the works sites	Contractor	Construction Works Sites	During Construction	EIA Recommendation and Air Pollution Control (Construction Dust) Regulation
		emission due to vehicular movement					
3.6.1.2	2.1	Best Practice for Dust Control The relevant best practices for dust control as stipulated in the Air Pollution Control (Construction Dust) Regulation should be adopted to further reduce the construction dust impacts of the Project. These best practices include: Good site management	To minimize adverse dust emission generated from various construction activities of the works sites	Contractor	Construction Works Sites	During Construction	EIA Recommendation and Air Pollution Control (Construction Dust) Regulation
		 The Contractor should maintain high standard of housekeeping to prevent emission of fugitive dust. Loading, unloading, handling and storage of raw materials, wastes or by-products should be carried out in a manner so as to minimize the release of visible dust emission. 					
		Any piles of materials accumulated on or around the work areas should be cleaned up regularly.					
		Cleaning, repair and maintenance of all plant facilities within the work areas should be carried out in a manner minimizing generation of fugitive dust emissions.					
		 The material should be handled properly to prevent fugitive dust emission before cleaning. Disturbed Parts of the Roads 					
		 Each and every main temporary access should be paved with 					

Objectives of the What requirements Who to Recommended When to **Recommended Mitigation Measures** EM&A implement Location of the or standards for the EIA Ref. Measure implement the Ref. the measure measure to measure? & Main Concerns measure? achieve? to address

concrete, bituminous hardcore materials or metal plates and kept clear of dusty materials; or

 Unpaved parts of the road should be sprayed with water or a dust suppression chemical so as to keep the entire road surface wet.

Exposed Earth

Exposed earth should be properly treated by compaction, hydroseeding, vegetation planting or seating with latex, vinyl, bitumen within six months after the last construction activity on the site or part of the site where the exposed earth lies.

Loading, Unloading or Transfer of Dusty Materials

 All dusty materials should be sprayed with water immediately prior to any loading or transfer operation so as to keep the dusty material wet.

Debris Handlina

- Any debris should be covered entirely by impervious sheeting or stored in a debris collection area sheltered on the top and the three sides.
- Before debris is dumped into a chute, water should be sprayed so that it remains wet when it is dumped.

Transport of Dusty Materials

 Vehicle used for transporting dusty materials/spoils should be covered with tarpaulin or similar material. The cover should extend over the edges of the sides and tailboards.

Wheel washing

Vehicle wheel washing facilities should be provided at each construction site exit. Immediately before leaving the construction site, every vehicle should be washed to remove any dusty materials from its body and wheels.

Use of vehicles

- Immediately before leaving the construction site, every vehicle should be washed to remove any dusty materials from its body and wheels.
- Where a vehicle leaving the construction site is carrying a load of dusty materials, the load should be covered entirely by clean impervious sheeting to ensure that the dusty materials do not leak from the vehicle.

EIA Ref.	EM&A Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measure & Main Concerns to address	Who to implement the measure?	Location of the measure	When to implement the measure?	What requirements or standards for the measure to achieve?
		Site hoarding Where a site boundary adjoins a road, street, service lane or other area accessible to the public, hoarding of not less than 2.4m high from ground level should be provided along the entire length of that portion of the site boundary except for a site entrance or exit. Blasting The areas within 30m from the blasting area should be wetted with water prior to blasting.					
Air Qualit	ty Impact (Operation)					
3.5.2.2	2.2	 The following odour containment and control measures will be provided for the proposed sewage treatment work at the BCP site: The treatment work will be totally enclosed. Negative pressure ventilation will be provided within the enclosure to avoid any fugitive odorous emission from the treatment work. Further odour containment will be achieved by covering or confining the sewage channels, sewage tanks, and equipment with potential odour emission. Proper mixing will be provided at the equalization and sludge holding tanks to prevent sewage septicity. Chemical or biological deodorisation facilities with a minimum odour removal efficiency of 90% will be provided to treat potential odorous emissions from the treatment plant including sewage channels / tanks, filter press and screening facilities so as to minimize any potential odour impact to the nearby ASRs. 	To minimize potential odour impact from operation of the proposed sewage treatment work at BCP	DSD	BCP	Operation Phase	EIA recommendation
Noise Imp	pact (Cons	truction)					
4.4.1.4	3.1	Adoption of Quieter PME Use of the recommended quieter PME such as those given in the BS5228: Part 1:2009 and presented in Table 4.14, which can be found in Hong Kong.	To minimize the construction air-borne noise impact	Contractors	Construction Work Sites	During Construction	EIA recommendation, EIAO and Noise Control Ordinance (NCO)

EIA Ref.	EM&A Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measure & Main Concerns to address	Who to implement the measure?	Location of the measure	When to implement the measure?	What requirements or standards for the measure to achieve?
4.4.1.4	3.1	Use of Movable Noise Barrier The use of movable barrier for certain PME can further alleviate the construction noise impacts. In general, a 5 dB(A) reduction for movable PME and 10 dB(A) for stationary PME can be achieved depending on the actual design of the movable noise barrier. The Contractor shall be responsible for design of the movable noise barrier with due consideration given to the size of the PME and the requirement for intercepting the line of sight between the NSRs and PME. Barrier material with surface mass in excess of 7 kg/m² is recommended to achieve the predicted screening effect.	To minimize the construction airborne noise impact	Contractors	Construction Work Sites	During Construction	EIA recommendation, EIAO and NCO
4.4.1.4	3.1	Use of Noise Enclosure/ Acoustic Shed The use of noise enclosure or acoustic shed is to cover stationary PME such as air compressor and concrete pump. With the adoption of the noise enclosure, the PME could be completely screened, and noise reduction of 15 dB(A) can be achieved according to the GW-TM.	To minimize the construction airborne noise impact	Contractors	Construction Work Sites	During Construction	EIA recommendation, EIAO and NCO
4.4.1.4	3.1	Use of Noise Insulating Fabric Noise insulating fabric can be adopted for certain PME (e.g. drill rig, pilling auger etc). The insulating fabric should be lapped such that there are no openings or gaps on the joints. Technical data from manufacturers state that by using the Fabric, a noise reduction of over 10 dB(A) can be achieved on noise level.	To minimize the construction airborne noise impact	Contractors	Construction Work Sites	During Construction	EIA recommendation, EIAO and NCO

EIA Ref.	EM&A Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measure & Main Concerns to address	Who to implement the measure?	Location of the measure	When to implement the measure?	What requirements or standards for the measure to achieve?
4.4.1.4	3.1	 Good Site Practice The good site practices listed below should be followed during each phase of construction: Only well-maintained plant should be operated on-site and plant should be serviced regularly during the construction programme; Silencers or mufflers on construction equipment should be utilized and should be properly maintained during the construction programme; Mobile plant, if any, should be sited as far from NSRs as possible; Machines and plant (such as trucks) that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum; Plant known to emit noise strongly in one direction should, wherever possible, be orientated so that the noise is directed away from the nearby NSRs; and Material stockpiles and other structures should be effectively utilized, wherever practicable, in screening noise from on-site construction activities. 	To minimize the construction air-borne noise impact	Contractors	Construction Work Sites	During Construction	EIA recommendation, EIAO and NCO
Noise Im	pact (Oper

4504	3.2	The following noise reduction managers aball he considered as for ea	to address		BCP,	Before	EIAO and NCO
4.5.2.4	3.2	The following noise reduction measures shall be considered as far as practicable during operation:	To minimize the fixed plant noise	Managing Authority of	Administration	Operation	EIAO and NCO
		 Choose quieter plant such as those which have been effectively silenced; 	impact	the buildings / Contractor	Building and all ventilation buildings		
		• Include noise levels specification when ordering new plant (including chillier and E/M equipment);					
		• Locate fixed plant/louver away from any NSRs as far as practicable;					
		Locate fixed plant in walled plant rooms or in specially designed enclosures;					
		• Locate noisy machines in a basement or a completely separate building;					
		• Install direct noise mitigation measures including silencers, acoustic louvers and acoustic enclosure where necessary; and					
		 Develop and implement a regularly scheduled plant maintenance programme so that equipment is properly operated and serviced in order to maintain a controlled level of noise. 					
Water Qu	uality Impac						
5.6.1.1	4.1	Construction site runoff and drainage	To control site	Contractor	Construction	Construction	Practice Note for
5.6.1.1	4.1	The site practices outlined in ProPECC Note PN 1/94 should be followed as far as practicable in order to minimise surface runoff and the chance of erosion. The following measures are recommended to protect water quality and when properly implemented should be sufficient to adequately control site discharges so as to avoid water quality impacts:	runoff and drainage; prevent high sediment loading from reaching the nearby watercourses		Works Sites	Phase	Professional Persons on Construction Site Drainage (ProPECC Note PN 1/94)
		At the start of site establishment, perimeter cut-off drains to direct off-site water around the site should be constructed with internal drainage works and erosion and sedimentation control facilities implemented. Channels (both temporary and permanent drainage pipes and culverts), earth bunds or sand bag barriers should be provided on site to direct stormwater to silt removal facilities. The design of the temporary on-site drainage system should be undertaken by the Contractor prior to the commencement of construction.					
		The dikes or embankments for flood protection should be implemented around the boundaries of earthwork areas.					

Objectives of the What requirements Who to Recommended When to **Recommended Mitigation Measures** EM&A implement Location of the or standards for the Measure EIA Ref. implement the Ref. the measure measure to measure? & Main Concerns measure? achieve? to address

Temporary ditches should be provided to facilitate the runoff discharge into stormwater drainage system through a sediment/silt trap. The sediment/silt traps should be incorporated in the permanent drainage channels to enhance deposition rates, if practical.

- Sand/silt removal facilities such as sand/silt traps and sediment basins should be provided to remove sand/silt particles from runoff to meet the requirements of the TM standards under the WPCO. The design of efficient silt removal facilities should be based on the guidelines in Appendix A1 of ProPECC Note PN 1/94. Sizes may vary depending upon the flow rate. The detailed design of the sand/silt traps should be undertaken by the Contractor prior to the commencement of construction.
- All drainage facilities and erosion and sediment control structures should be regularly inspected and maintained to ensure proper and efficient operation at all times and particularly during rainstorms. Deposited silt and grit should be regularly removed, at the onset of and after each rainstorm to ensure that these facilities are functioning properly at all times.
- Measures should be taken to minimize the ingress of site drainage into excavations. If excavation of trenches in wet periods is necessary, they should be dug and backfilled in short sections wherever practicable. Water pumped out from foundation excavations should be discharged into storm drains via silt removal facilities.
- If surface excavation works cannot be avoided during the wet season (April to September), temporarily exposed slope/soil surfaces should be covered by tarpaulin or other means, as far as practicable, and temporary access roads should be protected by crushed stone or gravel, as excavation proceeds. Interception channels should be provided (e.g. along the crest/edge of the excavation) to prevent storm runoff from washing across exposed soil surfaces. Arrangements should always be in place to ensure that adequate surface protection measures can be safely carried out well before the arrival of a rainstorm. Other measures that need to be implemented before, during and after rainstorms are summarized in ProPECC Note PN 1/94.
- The overall slope of the site should be kept to a minimum to reduce

EIA Ref.	EM&A	Recommended Mitigation Measures	Objectives of the Recommended Measure	Who to implement	Location of the	When to implement the	What requirements or standards for the
	Ref.		& Main Concerns to address	the measure?	measure	measure?	measure to achieve?
		the erosive potential of surface water flows.	·				
		All vehicles and plant should be cleaned before leaving a construction site to ensure no earth, mud, debris and the like is deposited by them on roads. An adequately designed and sited wheel washing facility should be provided at construction site exit where practicable. Wash-water should have sand and silt settled out and removed regularly to ensure the continued efficiency of the process. The section of access road leading to, and exiting from, the wheel-wash bay to the public road should be paved with sufficient backfall toward the wheel-wash bay to prevent vehicle tracking of soil and silty water to public roads and drains.					
		Open stockpiles of construction materials or construction wastes on-site should be covered with tarpaulin or similar fabric during rainstorms. Measures should be taken to prevent the washing away of construction materials, soil, silt or debris into any drainage system.					
		Manholes (including newly constructed ones) should be adequately covered and temporarily sealed so as to prevent silt, construction materials or debris being washed into the drainage system and stormwater runoff being directed into foul sewers.					
		Precautions should be taken at any time of the year when rainstorms are likely. Actions should be taken when a rainstorm is imminent or forecasted and actions to be taken during or after rainstorms are summarized in Appendix A2 of ProPECC Note PN 1/94. Particular attention should be paid to the control of silty surface runoff during storm events, especially for areas located near steep slopes.					
		■ Bentonite slurries used in piling or slurry walling should be reconditioned and reused wherever practicable. Temporary enclosed storage locations should be provided on-site for any unused bentonite that needs to be transported away after all the related construction activities are completed. The requirements in ProPECC Note PN 1/94 should be adhered to in the handling and disposal of bentonite slurries.					
5.6.1.1	4.1	Good site practices for works within water gathering grounds	To minimize water	Contractor	Construction	Construction	ProPECC Note PN
		The following conditions should be complied, if there is any works to be carried out within the water gathering grounds:	quality impacts to the water gathering grounds		Works Sites within the water gathering	Phase	1/94

EIA Ref.	EM&A Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measure & Main Concerns to address	Who to implement the measure?	Location of the measure	When to implement the measure?	What requirements or standards for the measure to achieve?
					arounds		

- Adequate measures should be implemented to ensure no pollution or siltation occurs to the catchwaters and catchments.
- No earth, building materials, oil or fuel, soil, toxic materials or any materials that may possibly cause contamination to water gathering grounds are allowed to be stockpiled on site.
- All surplus spoil should be removed from water gathering grounds as soon as possible.
- Temporary drains with silt traps should be constructed at the site boundary before the commencement of any earthworks.
- Regular cleaning of silt traps should be carried out to ensure proper operation at all time.
- All excavated or filled surfaces which have the risk of erosion should always be protected form erosion.
- Facilities for washing the wheels of vehicles before leaving the site should be provided.
- Any construction plant which causes pollution to catchwaters or catchments due to the leakage of oil or fuel should be removed off site immediately.
- No maintenance activities which may generate chemical wastes should be undertaken in the water gathering grounds. Vehicle maintenance should be confined to designated paved areas only and any spillages should be cleared up immediately using absorbents and waste oils should be collected in designated tanks prior to disposal off site. All storm water run-off from these areas should be discharged via oil/petrol separators and sand/silt removal traps.
- Any soil contaminated with fuel leaked from plant should be removed off site and the voids arising from removal of contaminated soil should be replaced by suitable material approved by the Director of Water Supplies.
- Provision of temporary toilet facilities and use of chemicals or insecticide of any kind are subject to the approval of the Director of Water Supplies.
- Drainage plans should be submitted for approval by the Director of

grounds

5.6.1.2 4.1		Water Supplies. An unimpeded access through the waterworks access road should always be maintained. Earthworks near catchwaters or streamcourses should only be carried out in dry season between October and March.	'				
5.6.1.2 4.1		always be maintained. Earthworks near catchwaters or streamcourses should only be					
5.6.1.2 4.1		,					
5.6.1.2 4.1		carried out in any coacon between cotober and march,					
5.6.1.2 4.1		Advance notice must be given before the commencement of works on site quoting WSD's approval letter reference.					
	1	Good site practices of general construction activities	To minimize water quality impacts	Contractor	All construction	Construction phase	EIA Recommendation
		Construction solid waste, debris and refuse generated on-site should be collected, handled and disposed of properly to avoid entering any nearby stormwater drain. Stockpiles of cement and other construction materials should be kept covered when not being used.			works sites		
		Oils and fuels should only be stored in designated areas which have pollution prevention facilities. To prevent spillage of fuels and solvents to any nearby stormwater drain, all fuel tanks and storage areas should be provided with locks and be sited on sealed areas, within bunds of a capacity equal to 110% of the storage capacity of the largest tank. The bund should be drained of rainwater after a rain event.					
5.6.1.3 4.1	1	Sewage effluent from construction workforce	To minimize water	Contractor	All construction	Construction	EIA Recommendation
		Temporary sanitary facilities, such as portable chemical toilets, should be employed on-site where necessary to handle sewage from the workforce. A licensed contractor should be employed to provide appropriate and adequate portable toilets and be responsible for appropriate disposal and maintenance.	quality impacts		works sites with on-site sanitary facilities	phase	and Water Pollution Control Ordinance (WPCO)
5.6.1.4 4.1	1	Hydrogeological Impact	To minimize water	Contractor	Construction works sites of the drill and blast tunnel	Construction phase	EIA Recommendation and WPCO
		Grout injection works would be conducted before blasting, for sealing a limited area around the tunnel with a grout of a suitable strength for controlling the potential groundwater inflows. The pre-injection grouting method would be supplemented by post-injection grouting where necessary to further enhance the groundwater inflow control. On-site treatment for the groundwater ingress pumped out would be required to remove any contamination by grouting materials before discharge off-site.	quality impacts				
Nater Quality	y Impac	t (Operation)					
		No mitigation measure is required.					

EIA Ref.	EM&A Ref.		Objectives of the Recommended Measure	Who to implement the	Location of the measure	When to implement the measure?	What requirements or standards for the measure to achieve?
			& Main Concerns to address	measure?			
Sewage a	and Sewera	age Treatment Impact (Construction)					
6.7	5	The sewage generated by the on-site workforce should be collected in chemical toilets and disposed of off-site by a licensed waste collector.	To minimize water quality impacts	Contractor	All construction works sites with on-site sanitary facilities	Construction phase	EIA recommendation and WPCO
Sewage a	and Sewera	age Treatment Impact (Operation)					
6.6.3	5	Sewage generated by the BCP and Chuk Yuen Village Resite will be collected and treated by the proposed on-site sewage treatment facility using Membrane Bioreactor treatment with a portion of the treated wastewater reused for irrigation and flushing within the BCP.	To minimize water quality impacts	DSD	BCP	Operation phase	EIA recommendation and WPCO
6.5.3	5	Sewage generated from the Administration Building will be discharged to the existing local sewerage system.	To minimize water quality impacts	DSD	Administration Building	Operation phase	EIA recommendation and WPCO
Waste Ma	anagement	Implication (Construction)					
7.6.1.1	6	Good Site Practices Adverse impacts related to waste management such as potential hazard, air, odour, noise, wastewater discharge and public transport as mentioned in section 3.4.7.2 (ii)(c) of the Study Brief are not expected to arise, provided that good site practices are strictly followed. Recommendations for good site practices during the construction activities include:	To minimize adverse environmental impact	Contractor	Construction works sites (general)	Construction Phase	EIA recommendation Waste Disposal Ordinance; Waste Disposal (Chemical Wastes) (General) Regulation; and ETWB TC(W) No.
		Nomination of an approved person, such as a site manager, to be responsible for good site practices, arrangements for collection and effective disposal to an appropriate facility, of all wastes generated at the site					19/2005, Environmental Management on Construction Site
		 Training of site personnel in proper waste management and chemical handling procedures 					
		 Provision of sufficient waste disposal points and regular collection of waste 					
		 Dust suppression measures as required under the Air Pollution Control (Construction Dust) Regulation should be followed as far as practicable. Appropriate measures to minimise windblown litter and dust/odour during transportation of waste by covering trucks or in enclosed containers 					
		 General refuse shall be removed away immediately for disposal. As 					

EIA Ref.	EM&A Ref.	Recommended Mitigation Measures	Objectives of the Recommended Measure & Main Concerns to address	Who to implement the measure?	Location of the measure	When to implement the measure?	What requirements or standards for the measure to achieve?
		such odour is not anticipated to be an issue to distant sensitive receivers					
		Provision of wheel washing facilities before the trucks leaving the works area so as to minimise dust introduction from public road					
		 Covers and water spraying system should be provided for the stockpiled C&D material to prevent dust impact or being washed away 					
		 Designate different locations for storage of C&D material to enhance reuse 					
		■ Well planned programme for transportation of C&D material to lessen the off-site traffic impact. Well planned delivery programme for offsite disposal and imported filling material such that adverse noise impact from transporting of C&D material is not anticipated					
		■ Site practices outlined in ProPECC PN 1/94 "Construction Site Drainage" should be adopted as far as practicable, such as cleaning and maintenance of drainage systems regularly					
		 Provision of cover for the stockpile material, sand bag or earth bund as barrier to prevent material from washing away and entering the drains 					
7.6.1.2	6	Waste Reduction Measures	To reduce the	Contractor	Construction	Construction	EIA recommendation
		Good management and control can prevent the generation of a significant amount of waste. Waste reduction is best achieved at the planning and design stage, as well as by ensuring the implementation of good site practices. Recommendations to achieve waste reduction include:	quantity of wastes		works sites (General)	Phase	and Waste Disposal Ordinance
		 Segregation and storage of different types of waste in different containers, skips or stockpiles to enhance reuse or recycling of materials and their proper disposal 					
		Encourage collection of aluminium cans by providing separate labelled bins to enable this waste to be segregated from other general refuse generated by the work force					
		 Proper storage and site practices to minimise the potential for damage or contamination of construction materials 					
		Plan and stock construction materials carefully to minimise amount					

EIA Ref.	EM&A Ref.		Objectives of the Recommended Measure	Who to implement the	Location of the measure	When to implement the measure?	What requirements or standards for the measure to achieve?
	nei.		& Main Concerns to address	measure?			
		of waste generated and avoid unnecessary generation of waste					
		In addition to the above measures, specific mitigation measures are recommended below for the identified waste arising to minimise environmental impacts during handling, transportation and disposal of these wastes.					
7.6.1.3	6	C&D Materials	To minimize	Contractor	Construction	Construction	EIA recommendation;
		In order to minimise impacts resulting from collection and transportation of C&D material for off-site disposal, the excavated materials should be reused on-site as backfilling material as far as practicable. The surplus rock and other inert C&D material would be disposed of at the Government's Public Fill Reception Facilities (PFRFs) at Tuen Mun Area 38 for beneficial use by other projects in the HKSAR as the last resort. C&D waste generated from general site clearance and tree felling works would require disposal to the designated landfill site. Other mitigation requirements are listed below:	impacts resulting from C&D material		Works Sites (General)	Phase	Waste Disposal Ordinance; and ETWB TCW No. 31/2004
		 A Waste Management Plan should be prepared and implemented in accordance with ETWB TC(W) No. 19/2005 Environmental Management on Construction Site; and 					
		■ In order to monitor the disposal of C&D material and solid wastes at public filling facilities and landfills, and to control fly-tipping, a trip-ticket system (e.g. ETWB TCW No. 31/2004) should be included.					
7.6.1.4	6	General refuse General refuse should be stored in enclosed bins or compaction units separated from other C&D material. A reputable waste collector is to be employed by the Contractor to remove general refuse from the site separately. Preferably an enclosed and covered area should be provided to reduce the occurrence of 'wind blown' litter.	To minimize impacts resulting from collection and transportation of general refuse for off-site disposal	Contractor	Construction works sites (General)	Construction phase	Waste Disposal Ordinance and Public Health and Municipal Services Ordinance - Public Cleansing and Prevention of Nuisances Regulation
7.6.1.5	6	Chemical waste If chemical wastes are produced at the construction site, the Contractor will be required to register with the EPD as a chemical waste producer and to follow the guidelines stated in the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes. Good quality containers compatible with the chemical wastes should be used, and incompatible chemicals should be stored separately. Appropriate labels should be securely attached on each chemical waste container indicating the corresponding chemical characteristics of the chemical	To minimize impacts resulting from collection and transportation of chemical waste for off-site disposal	Contractor	Construction works sites (General)	Construction phase	Waste Disposal (Chemical Waste) (General) Regulation and Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes
